**Risks:** The ability of the fund to achieve its investment goal depends, in part, on the ability of the investment adviser to allocate effectively the fund's assets among the asset classes and the underlying funds. There can be no assurance that the actual allocations will be effective in achieving the fund's investment goal. The underlying funds may not achieve their investment objectives, and their performance may be lower than that of the asset class the underlying funds were selected to represent. An investment in the fund is subject to both the risks of investment in the securities held directly by the fund and the risks of investments in the securities held by the underlying funds. The fund's performance therefore depends not only on the allocation of its assets among securities and the various underlying funds, but also on the performance of the securities themselves and the underlying funds' ability to meet their investment objectives. Because the fund invests, directly and through the underlying funds, in both equity securities and bonds, the fund is subject to equity risk, interest rate risk, credit risk and other principal risks. A more comprehensive review of the fund's risks is described in the fund's prospectus.
