Corporation.

Effective on January 31, 2018, The Boston Company Asset Management LLC (TBCAM) and Standish Mellon Asset Management Company LLC (Standish) merged into Mellon Capital Management Corporation (Mellon Capital), which immediately changed its name to BNY Mellon Asset Management North America Corporation.

## Growth of a \$10,000 Investment<sup>1</sup>

A hypothetical \$10,000 investment in the fund's Class A shares on 12/8/88 would have been worth \$53,328 on 6/30/18.

This does not reflect the 5.75% maximum front-end sales load applicable to Class A shares which, if reflected, would have lowered performance. Assumes reinvestment of dividends and capital gains. Performance for the fund's other share classes would vary.

The performance data quoted represents past performance, which is no guarantee of future results. Share price and investment return fluctuate and an investor's shares may be worth more or less than original cost upon redemption. Current performance may be higher than the performance quoted. Funds with less than 1 year's history, year-to-date and 3 month performance are not annualized. Go to [Dreyfus.com](http://Dreyfus.com) for the fund's most recent month-end returns. The net expense ratio(s) reflect a contractual expense reduction agreement through 09/29/2018. Total Expense Ratios: Class A 1.64%, Class C 2.13%, Class I 1.19%. Net Expense Ratios: Class A 1.12%, Class C 1.90%, Class I 0.85%.

<sup>1</sup>Prior to 8/1/07, the fund invested its assets in a "master portfolio" that had the same investment objective and policies as the fund. This arrangement was terminated on 8/1/07 and the fund operates as a standalone fund. Performance information represents the performance of the predecessor master portfolio (and its predecessor fund) and the expenses of the master portfolio's predecessor fund through 1/31/03 and the fund's performance and expense structure thereafter. The master portfolio's predecessor fund contributed all of its assets to the master portfolio before the fund commenced investment operations on 2/1/03. 12/8/88 represents the inception date of the master portfolio's unregistered predecessor fund. All returns assume reinvestment of dividends and distributions. Investors should consider, when deciding to purchase a particular class of shares, the investment amount, class restrictions, anticipated holding period and other relevant factors. <sup>2</sup>Portfolio composition is as of 6/30/18 and is subject to change at any time. <sup>3</sup>Performance figures may reflect reimbursements or fee waivers, without which the performance would have been lower. <sup>4</sup>Source: FactSet. Reflects reinvestment of net dividends and, where applicable, capital gain distributions. The MSCI EAFE Index (Europe, Australasia, Far East) is a free float-adjusted marketcapitalization-weighted index that is designed to measure the equity market performance of developed markets, excluding the U.S. and Canada. Investors cannot invest directly in any index.

## GOAL/APPROACH

The fund seeks long-term growth of capital. To pursue this goal, the fund normally invests at least 80% of its assets in equity securities of companies located in the foreign countries represented in the Morgan Stanley Capital International Europe, Australasia and Far East (EAFE) Index and Canada. The fund's stock investments may include common stocks, preferred stocks and convertible securities. The fund intends to invest in a broad range of countries. The fund may invest up to 20% of its assets in securities of issuers located in emerging market countries, but no more than 5% of its assets may be invested in issuers located in any one emerging market country. The fund invests in stocks that appear to be undervalued (as measured by their price/earnings ratios) and that may have value and/or growth characteristics. The portfolio managers employ a bottom-up investment approach, which emphasizes individual stock selection.

### Main Risks

**Equities** are subject to market, market sector, market liquidity, issuer, and investment style risks, to varying degrees. Investing in **foreign denominated and/or domiciled securities** involves special risks, including changes in currency exchange rates, political, economic, and social instability, limited company information, differing auditing and legal standards, and less market liquidity. These risks generally are greater with emerging market countries. A significant overweight or underweight of companies, industries, or market sectors could cause performance to be more or less sensitive to developments affecting those sectors.

**Diversification** cannot assure a profit or protect against loss.
