

# BNY Mellon Absolute Insight Multi-Strategy Fund

# Jun 30

Seeking uncorrelated returns

2018

Class A MAJAX    Class C MAJCX    Class I MAJIX

*The BNY Mellon Absolute Insight Multi-Strategy Fund provides investors with a differentiated liquid alternative offering. The fund seeks to generate positive returns over rolling 12-month periods with less volatility than stocks and low correlation to both stocks and bonds.*

Dynamic Opportunities	19.41	-0.09	0.19
Currency	9.90	-0.06	-0.15
Cash/Other	0.35	0.03	0.02

## GOAL/APPROACH

### Multiple Strategies, Multiple Universes, Specialist Teams

The BNY Mellon Absolute Insight Multi-Strategy Fund follows a multi-strategy approach by investing in absolute return strategies that have historically exhibited a low correlation to each other, each managed by a specialist team across a different investment universe. This approach gains access to a large number of uncorrelated investment ideas in seeking to achieve a high level of built in diversification. The strategies are combined with an aim of giving the portfolio stability, diversification and upside-capture.

## Risks

**Bonds** are subject to interest-rate, credit, liquidity, call and market risks, to varying degrees. Generally, all other factors being equal, bond prices are inversely related to interest-rate changes and rate increases can cause price declines. The use of **derivatives** involves risks different from, or possibly greater than, the risks associated with investing directly in the underlying assets. Derivatives can be highly volatile, illiquid, and difficult to value and there is the risk that changes in the value of a derivative held by the portfolio will not correlate with the underlying instruments or the portfolio's other investments. **Equities** are subject to market, market sector, market liquidity, issuer, and investment style risks, to varying degrees. **Currencies** are subject to the risk that those currencies will decline in value relative to a local currency, or, in the case of hedged positions, that the local currency will decline relative to the currency being hedged. These risks may increase fund volatility. Investing in **foreign denominated and/or domiciled securities** involves special risks, including changes in currency exchange rates, political, economic, and social instability, limited company information, differing auditing and legal standards, and less market liquidity. These risks generally are greater with emerging market countries. **Short sales** involve selling a security the portfolio does not own in anticipation that the security's price will decline. Short sales may involve risk and leverage, and expose the portfolio to the risk that it will be required to buy the security sold short at a time when the security has appreciated in value, thus resulting in a loss.
