BNY MELLON INTERNATIONAL APPRECIATION FUND – CLASS M

Goal/Approach

The fund seeks to provide long-term capital appreciation.

To pursue its goal, the fund normally invests at least 80% of its net assets, plus any borrowings for investment purposes, in equity securities. The fund invests primarily in equity securities of non-U.S. issuers. Equity securities include Depository Receipts (DRs), common stocks, preferred stocks, convertible securities, equity securities in foreign investment funds or trusts, and other equity investments. The fund invests primarily in DRs representing the local shares of non-U.S. companies, in particular, American Depository Receipts (ADRs).

In selecting securities, the investment screens the Morgan Stanley Capital International Europe, Australasia and Far East (MSCI EAFE) Index universe of approximately 1,000 issuers for the availability of issuers with a sponsored or unsponsored DR facility. The investment adviser then analyzes issuers with DR facilities using a proprietary mathematical algorithm to reflect the characteristics of the developed markets. The fund will generally not invest in securities from

developing countries because they are not included in the MSCI EAFE.

Certain Risks

The fund is generally subject to market, issuer and investment style risks, to varying degrees, all of which are more fully described in the fund's prospectus.

Special risks associated with investments in foreign companies include exposure to currency fluctuations, less liquidity, less developed or less efficient trading markets, lack of comprehensive company information, political and economic instability and differing auditing and legal standards. Currency rates in foreign countries may fluctuate significantly over short periods of time. Foreign currencies also are subject to risks caused by inflation, interest rates, budget deficits and low savings rates, political factors and government controls.
