Fund Description
The fund seeks high current income consistent with the maintenance of liquidity and low volatility of principal. The fund is designed to provide a high degree of share price stability while generating higher returns than money market funds over time and, thus, may be an investment alternative to money market funds and other fixed-income funds.

The fund is not a money market fund and is not subject to the maturity, quality, liquidity and diversification requirements applicable to money market funds.

Short-term bond funds do not attempt to maintain a stable NAV of $1.00 and are subject to greater risk than money market funds.

**Certain Risks**

The fund’s share price will fluctuate, which means you could lose money by investing in the fund. Bond funds are subject generally to interest-rate, credit, liquidity, call, and market risks, to varying degrees, all of which are more fully described in the fund’s prospectus. Prices of fixed-income securities tend to move inversely with changes in interest rates. Typically, a rise in rates will adversely affect prices of fixed-income securities and, accordingly, the fund’s share price.

When there is little or no active trading market for specific types of securities, it can become more difficult to sell the securities at or near their perceived value. In such a market, the value of such securities may fall dramatically, potentially lowering the fund’s share price, even during periods of declining interest rates. Also, during such periods, redemptions by a few large investors in the fund may have a significant adverse effect on the fund’s net asset value and remaining fund shareholders.

Investors should consider the investment objectives, risks, charges, and expenses of a mutual fund carefully before investing. To obtain a prospectus, or summary prospectus, if available, that contains this and other information about the fund, contact your financial advisor or visit www.bnymellonim.com/us. Read the prospectus carefully before investing.
