

# Dreyfus Global Multi-Asset Income Fund

Seeking to deliver attractive income and the potential for total returns

Sep 30  
2018

Class A DRAAX    Class C DRACX    Class I DRAIX

**Goal/Approach**

The fund seeks current income, while maintaining the potential for long-term capital appreciation. To pursue its goal, the fund uses an actively-managed global multi-asset strategy that focuses on income generation. The fund's sub-adviser allocates the fund's investments among equity and equity-related securities, debt and debt-related securities, and, generally to a lesser extent, real estate, commodities and infrastructure in developed and emerging markets.

**Growth of a \$10,000 Investment**

A hypothetical \$10,000 investment in the fund's Class A shares on 11/30/17 would have been worth \$10,008 on 9/30/18.

This does not reflect the 5.75% maximum front-end sales load applicable to Class A shares which, if reflected, would have lowered performance. Assumes reinvestment of dividends and capital gains. Performance for the fund's other share classes would vary.

### Risks

**Bonds** are subject to interest-rate, credit, liquidity, call and market risks, to varying degrees. Generally, all other factors being equal, bond prices are inversely related to interest-rate changes and rate increases can cause price declines. **Commodities** contain heightened risk including market, political, regulatory, and natural conditions, and may not be suitable for all investors. **Derivatives and commodity-linked derivatives** involve risks different from, or possibly greater than, the risks associated with investing directly in the underlying assets. Derivatives can be highly volatile, illiquid, and difficult to value and there is the risk that changes in the value of a derivative held by the portfolio will not correlate with the underlying instruments or the portfolio's other investments. Commodity-linked derivative instruments may involve additional costs and risks, such as commodity index volatility or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, political and regulatory developments. **High yield bonds** involve increased credit and liquidity risk than higher-rated bonds and are considered speculative in terms of the issuer's ability to pay interest and repay principal on a timely basis. **Equities** are subject to market, market sector, market liquidity, issuer, and investment style risks, to varying degrees. **Currencies** are subject to the risk that those currencies will decline in value relative to a local currency, or, in the case of hedged positions, that the local currency will decline relative to the currency being hedged. These risks may increase fund volatility. **Real estate investment trusts** are subject to risk, such as poor performance by the manager, adverse changes to tax laws or failure to qualify for tax-free pass-through of income.
