BNY MELLON ABSOLUTE INSIGHT FUNDS, INC.

- BNY MELLON INSIGHT BROAD OPPORTUNITIES FUND

Supplement to Statutory Prospectus

The following information supersedes and replaces the information contained in “Fund Summary – Fees and Expenses” in the fund’s statutory prospectus:

The fund's investment adviser, The Dreyfus Corporation, has contractually agreed, until March 1, 2019, to waive receipt of its fees and/or assume the direct expenses of the fund so that the direct expenses of none of the classes (excluding Rule 12b-1 fees, shareholder services fees, taxes, interest, brokerage commissions, commitment fees on borrowings and extraordinary expenses) exceed .95% of the fund’s average daily net assets. On or after March 1, 2019, The Dreyfus Corporation may terminate this expense limitation at any time.

DREYFUS FAMILY OF FUNDS

Supplement to Current Prospectus of Funds Offering Class A and/or Class Y Shares

Funds Offering Class Y Shares

The two bullet points below replace the first and second bullet points contained in the section of the fund's Prospectus entitled "Shareholder Guide—Choosing a Share Class—Class Y Shares":

Class Y shares of the fund may be purchased by:

- Institutional investors, acting for themselves or on behalf of their clients, that make an initial investment in Class Y shares of the fund of at least \$1 million
- Retirement Plans, or certain recordkeepers of Retirement Plan platforms that maintain plan level or super-omnibus accounts with the fund, provided that, in each case, they make an initial investment in Class Y shares of the fund of at least \$1 million per Retirement Plan sponsor or per super-omnibus account or have, in the opinion of Dreyfus, adequate intent and availability of assets to reach a future level of investment of \$1 million or more in Class Y shares of the fund

Funds Offering Class A Shares

The following information supplements and supersedes and replaces any contrary information contained in the section of the fund's Prospectus entitled "Shareholder Guide—Choosing a Share Class—Sales Charge Reductions and Waivers":

Front-end sales charge waivers on Class A shares purchased through Ameriprise Financial

Effective June 15, 2018, shareholders purchasing Class A shares of the fund through an Ameriprise Financial platform or account will be eligible only for the following sales charge waivers, which may differ from those disclosed elsewhere in this prospectus or the SAI. Such shareholders may purchase Class A shares at NAV without payment of a sales charge as follows:

- Shares purchased by employer-sponsored retirement plans (e.g., 401(k) plans, 457 plans, employer-sponsored 403(b) plans, profit sharing and money purchase pension plans and defined benefit plans). For purposes of this provision, employer-sponsored retirement plans do not include SEP IRAs, Simple IRAs or SAR-SEPs
- Shares purchased through an Ameriprise Financial investment advisory program
- Shares purchased by third party investment advisors on behalf of their advisory clients through Ameriprise Financial's platform
- Shares of the fund purchased through reinvestment of dividends and capital gains distributions of the fund (but not on any other fund in the Dreyfus Family of Funds)
- Shares exchanged from Class C shares of the same fund in the month of or following the 10-year anniversary of the purchase date. To the extent that this prospectus elsewhere provides for a waiver with respect to such shares following a shorter holding period, that waiver will apply to exchanges following such shorter period. To the extent that this prospectus elsewhere provides for a waiver with respect to exchanges of Class C shares for load waived shares, that waiver will also apply to such exchanges

- Shares purchased by employees and registered representatives of Ameriprise Financial or its affiliates and their immediate family members
- Shares purchased by or through qualified accounts (including IRAs, Coverdell Education Savings Accounts, 401(k)s, 403(b) TSCAs subject to ERISA and defined benefit plans) that are held by a covered family member, defined as an Ameriprise Financial advisor and/or the advisor's spouse, advisor's lineal ascendant (mother, father, grandmother, grandfather, great grandmother, great grandfather), advisor's lineal descendant (son, step-son, daughter, step-daughter, grandson, granddaughter, great grandson, great granddaughter) or any spouse of a covered family member who is a lineal descendant
- Shares purchased from the proceeds of redemptions of shares of a fund in the Dreyfus Family of Funds, provided (1) the repurchase occurs within 90 days following the redemption, (2) the redemption and purchase occur in the same account, and (3) redeemed shares were subject to a front-end sales charge or CDSC (i.e., Rights of Reinstatement)

* * * * *

Front-end sales charge waivers on Class A shares purchased through Morgan Stanley Wealth Management

Effective July 1, 2018, shareholders purchasing Class A shares of the fund through a Morgan Stanley Wealth Management transactional brokerage account will be eligible only for the following sales charge waivers, which may differ from those disclosed elsewhere in this prospectus or the SAI. Such shareholders may purchase Class A shares at NAV without payment of a sales charge as follows:

- Shares purchased by employer-sponsored retirement plans (e.g., 401(k) plans, 457 plans, employer-sponsored 403(b) plans, profit sharing and money purchase pension plans and defined benefit plans). For purposes of this provision, employer-sponsored retirement plans do not include SEP IRAs, Simple IRAs, SAR-SEPs or Keogh plans
- Shares purchased by Morgan Stanley employee and employee-related accounts according to Morgan Stanley's account linking rules
- Shares of the fund purchased through reinvestment of dividends and capital gains distributions of the fund
- Shares purchased through a Morgan Stanley self-directed brokerage account
- Class C shares that are no longer subject to a CDSC and are converted to Class A shares of the same fund pursuant to Morgan Stanley Wealth Management's share class conversion program
- Shares purchased from the proceeds of redemptions from a fund in the Dreyfus Family of Funds, provided (i) the repurchase occurs within 90 days following the redemption, (ii) the redemption and purchase occur in the same account, and (iii) redeemed shares were subject to a front-end sales charge or CDSC.

Fund Summary

Investment Objective

The fund seeks total return (consisting of capital appreciation and income).

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the fund. You may qualify for sales charge discounts if you and your family invest, or agree to invest in the future, at least \$50,000 in the fund or shares of other funds in the Dreyfus Family of Funds that are subject to a sales charge. More information about sales charges, including these and other discounts and waivers, is available from your financial professional and in the Shareholder Guide section beginning on page 23 of the prospectus and in the How to Buy Shares section and the Additional Information About How to Buy Shares section beginning on page II-1 and page III-1, respectively, of the fund's Statement of Additional Information.

Shareholder Fees (fees paid directly from your investment)				
	Class A	Class C	Class I	Class Y
Maximum sales charge (load) imposed on purchases <i>(as a percentage of offering price)</i>	5.75	none	none	none
Maximum deferred sales charge (load) <i>(as a percentage of lower of purchase or sale price)</i>	none*	1.00	none	none

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)				
	Class A	Class C	Class I	Class Y
Management fees	.75	.75	.75	.75
Distribution (12b-1) fees	none	.75	none	none
Other expenses <i>(including shareholder services fees)</i> ¹	.60	.60	.35	.35
Acquired fund fees and expenses ²	.09	.09	.09	.09
Total annual fund operating expenses	1.44	2.19	1.19	1.19
Fee waiver and/or expense reimbursement ³	(.24)	(.24)	(.24)	(.24)
Total annual fund operating expenses <i>(after fee waiver and/or expense reimbursement)</i>	1.20	1.95	.95	.95

* Class A shares bought without an initial sales charge as part of an investment of \$1 million or more may be charged a deferred sales charge of 1.00% if redeemed within one year.

¹ "Other expenses" are based on estimated amounts for the current fiscal year.

² "Acquired fund fees and expenses" are incurred indirectly by the fund as a result of its investment in underlying funds and are based on estimated amounts for the current fiscal year.

³ The fund's investment adviser, The Dreyfus Corporation, has contractually agreed, until November 1, 2018, to waive receipt of its fees and/or assume the expenses of the fund so that the expenses of none of the classes (excluding Rule 12b-1 fees, shareholder services fees, taxes, interest, brokerage commissions, commitment fees on borrowings and extraordinary expenses) exceed .95%. On or after November 1, 2018, The Dreyfus Corporation may terminate this expense limitation at any time.

Example

The Example is intended to help you compare the cost of investing in the fund with the cost of investing in other mutual funds. The Example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The one-year example and the first year of the three-years example are based on net operating expenses, which reflect the expense limitation agreement by The Dreyfus Corporation. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years
Class A	\$690	\$982
Class C	\$298	\$662
Class I	\$97	\$354
Class Y	\$97	\$354

You would pay the following expenses if you did not redeem your shares:

	1 Year	3 Years
Class A	\$690	\$982
Class C	\$198	\$662
Class I	\$97	\$354
Class Y	\$97	\$354

Portfolio Turnover

The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the fund's performance.

Principal Investment Strategy

To pursue its goal, the fund normally allocates its assets among a broad range of asset classes, including equities, fixed income, currencies, real estate, listed infrastructure and commodities, in developed and emerging markets. The fund will seek to gain exposure to various asset classes, including real estate, listed infrastructure and commodities, through direct investments in securities or derivative instruments and by investing in other investment companies (underlying funds), including exchange-traded funds (ETFs).

The fund's sub-adviser, Pareto Investment Management Limited, a wholly-owned subsidiary of Insight Investment Management Limited and an affiliate of The Dreyfus Corporation (Dreyfus), generally invests the fund's assets according to its view of macroeconomic themes, using the following investment strategies:

- **Directional Strategies:** For example, the sub-adviser may take the view that a particular U.S. equity market (e.g., large-cap stocks) will increase in value over the near term and, accordingly, may allocate fund assets by taking a long position in a U.S. large-cap equity market index future, or otherwise seek to identify large-cap stock investment opportunities.
- **Relative Value Strategies:** For example, the sub-adviser may take the view that large-cap companies will have positive performance and small-cap companies will have negative performance over the near term and, accordingly, may allocate fund assets by taking a long position in a U.S. large-cap equity market index future and a short position in a small-cap equity market index future, or otherwise seek to identify long/short investment opportunities.
- **Non-linear Strategies:** For example, the sub-adviser may take a view on market volatility and, accordingly, may allocate fund assets to exchange-traded or over-the-counter options that seek to capture range bound or breakout scenarios in market values (i.e., identifying price trends that indicate upper and lower price boundaries over a given time period and trading to take advantage when the stock "breaks out" of the boundary), or otherwise seek to identify opportunities to take advantage of volatility using derivative instruments.

The fund's sub-adviser dynamically adjusts the allocation of the fund's investments in seeking to opportunistically take advantage of investment strategies that are particularly attractive at the time of implementation, while limiting downside risk and volatility over a market cycle (typically five years).

The fund's sub-adviser has considerable latitude in allocating the fund's investments among a broad range of asset classes. The composition of the fund's investment portfolio will vary over time, based on the allocation to the investment strategies and the fund's exposure to the various asset classes. The fund may invest directly, through derivative instruments or through an underlying fund in the securities of U.S. and foreign issuers, including securities of issuers in developed and emerging market countries and securities denominated in a currency other than the U.S. dollar, securities of issuers of any market capitalization, and securities of any credit quality (including "investment grade," "high yield" or "junk" bonds), maturity or duration. The fund may hold a significant portion of its assets in U.S. government securities, high quality debt securities, money market instruments, cash and other cash equivalents to collateralize its

derivatives positions, pending investment or allocation to an asset class, to manage purchase and redemption activity, or for defensive purposes. The fund considers emerging market countries to be those countries defined as having an emerging or developing economy by the World Bank or its related organizations, or the United Nations or its authorities. The fund considers securities issued by companies organized or with their principal place of business, or majority of assets or business, in emerging market countries to be emerging market issuers. There is no minimum or maximum investment amount that the fund may invest in any particular country or region.

The fund is not managed to a benchmark index, nor will the fund's portfolio have the same characteristics as its designated broad-based securities market index — the Citi 1-Month Treasury Bill Index. Although the fund is not managed to a benchmark index, the fund will seek to provide a minimum average annual total return of USD 1-Month LIBOR plus 4.5%, before fees and expenses, over a five-year period. In seeking to achieve this target return, the fund's sub-adviser selects investment strategies and asset classes based on its view of macroeconomic themes at the time of investment. There is no assurance, however, that the fund will be able to provide such returns or positive returns, and an investor may lose money by investing in the fund.

The fund will use a significant degree of derivative instruments, to the extent permitted under the Investment Company Act of 1940, as amended, as a substitute for investing directly in an underlying asset, as an alternative to selling a security short, to increase returns, to manage foreign currency, credit or interest rate risk, to manage effective maturity or duration, as part of a hedging strategy, or for other purposes related to the management of the fund. These instruments may include principally options, futures and options on futures (including those relating to securities, foreign currencies, indices and interest rates), forward contracts (including foreign currency forward contracts), swaps (including total return, equity, currency, interest rate and credit default swaps), options on swaps, contracts for difference, and other derivative instruments (including commodity-linked instruments, such as structured notes). When the fund enters into derivatives transactions, it may be required to segregate liquid assets or enter into offsetting positions, in accordance with applicable regulations.

The fund expects to maintain significant short positions, principally through investments in derivative instruments such as futures, options, forward contracts, swap agreements and contracts for difference on market indices, currencies, sectors and individual securities. When taking short positions with respect to securities through investments in derivative instruments, the sub-adviser generally is expecting the value of the securities subject to the short to fall during the period of the fund's investment exposure. However, the fund will incur a loss on a short position in respect of a security if the price of the security subject to the short increases between the date the fund establishes the short position and the date the fund closes out the short position. When taking a short position, the fund's potential loss is the maximum attainable price of the security less the price at which the fund's position in the security was established.

The fund does not have any limitations regarding portfolio turnover. The fund may engage in short-term trading to try to achieve its objective and may have portfolio turnover rates in excess of 100%. A portfolio turnover of 100% is equivalent to the fund buying and selling all of the securities in its portfolio once during the course of a year.

Principal Risks

An investment in the fund is not a bank deposit. It is not insured or guaranteed by the Federal Deposit Insurance Corporation (FDIC) or any other government agency. It is not a complete investment program. The fund's share price fluctuates, sometimes dramatically, which means you could lose money.

- *Allocation risk.* The ability of the fund to achieve its investment goal depends, in part, on the ability of the fund's sub-adviser to allocate effectively the fund's assets among the investment strategies and asset classes. There can be no assurance that the actual allocations will be effective in achieving the fund's investment goal.
- *Correlation risk.* Because the fund allocates its investments among different asset classes, the fund is subject to correlation risk. Although the prices of equity securities and fixed-income securities, as well as other asset classes, often rise and fall at different times so that a fall in the price of one may be offset by a rise in the price of the other, in down markets the prices of these securities and asset classes can also fall in tandem.
- *Issuer risk.* A security's market value may decline for a number of reasons which directly relate to the issuer, such as management performance, financial leverage and reduced demand for the issuer's products or services, or factors that affect the issuer's industry, such as labor shortages or increased production costs and competitive conditions within an industry.
- *Market sector risk.* The fund may significantly overweight or underweight certain countries, companies, industries or market sectors, which may cause the fund's performance to be more or less sensitive to developments affecting those countries, companies, industries or sectors.

- *Risks of stock investing.* Stocks generally fluctuate more in value than bonds and may decline significantly over short time periods. There is the chance that stock prices overall will decline because stock markets tend to move in cycles, with periods of rising prices and falling prices. The market value of a stock may decline due to general market conditions or because of factors that affect the particular company or the company's industry.
- *Fixed-income market risk.* The market value of a fixed-income security may decline due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. The fixed-income securities market can be susceptible to increases in volatility and decreases in liquidity. Liquidity can decline unpredictably in response to overall economic conditions or credit tightening. Increases in volatility and decreases in liquidity may be caused by a rise in interest rates (or the expectation of a rise in interest rates), which currently are at or near historic lows in the United States and in other countries. An unexpected increase in fund redemption requests, including requests from shareholders who may own a significant percentage of the fund's shares, which may be triggered by market turmoil or an increase in interest rates, could cause the fund to sell its holdings at a loss or at undesirable prices and adversely affect the fund's share price and increase the fund's liquidity risk, fund expenses and/or taxable distributions.
- *ETF and other investment company risk.* To the extent the fund invests in pooled investment vehicles, such as ETFs and other investment companies, the fund will be affected by the investment policies, practices and performance of such entities in direct proportion to the amount of assets the fund has invested therein. The risks of investing in other investment companies, including ETFs, typically reflect the risks associated with the types of instruments in which the investment companies invest. When the fund invests in an ETF or other investment company, shareholders of the fund will bear indirectly their proportionate share of the expenses of the ETF or other investment company (including management fees) in addition to the expenses of the fund.
- *Foreign investment risk.* To the extent the fund invests in foreign securities, the fund's performance will be influenced by political, social and economic factors affecting investments in foreign issuers. Special risks associated with investments in foreign issuers include exposure to currency fluctuations, less liquidity, less developed or less efficient trading markets, lack of comprehensive company information, political and economic instability and differing auditing and legal standards. Investments denominated in foreign currencies are subject to the risk that such currencies will decline in value relative to the U.S. dollar and affect the value of these investments held by the fund. To the extent the fund's investments are focused in a limited number of foreign countries, the fund's performance could be more volatile than that of more geographically diversified funds.
- *Emerging market risk.* The securities of issuers located or doing substantial business in emerging market countries tend to be more volatile and less liquid than the securities of issuers located in countries with more mature economies. Emerging markets generally have less diverse and less mature economic structures and less stable political systems than those of developed countries. Investments in these countries may be subject to political, economic, legal, market and currency risks. The risks may include less protection of property rights and uncertain political and economic policies, the imposition of capital controls and/or foreign investment limitations by a country, nationalization of businesses and the imposition of sanctions by other countries, such as the United States.
- *Foreign government obligations and securities of supranational entities risk.* Investing in foreign government obligations, debt obligations of supranational entities and the sovereign debt of foreign countries, including emerging market countries, creates exposure to the direct or indirect consequences of political, social or economic changes in the countries that issue the securities or in which the issuers are located. A governmental obligor may default on its obligations. Some sovereign obligors have been among the world's largest debtors to commercial banks, other governments, international financial organizations and other financial institutions. These obligors, in the past, have experienced substantial difficulties in servicing their external debt obligations, which led to defaults on certain obligations and the restructuring of certain indebtedness.
- *Foreign currency risk.* Investments in foreign currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar or, in the case of hedged positions, that the U.S. dollar will decline relative to the currency being hedged. Currency exchange rates may fluctuate significantly over short periods of time. Foreign currencies, particularly the currencies of emerging market countries, are also subject to risks caused by inflation, interest rates, budget deficits and low savings rates, political factors and government intervention and controls.
- *Interest rate risk.* Prices of bonds and other fixed rate fixed-income securities tend to move inversely with changes in interest rates. Typically, a rise in rates will adversely affect fixed-income securities and, accordingly, will cause the value of the fund's investments in these securities to decline. During periods of very low interest rates, which occur from time to time due to market forces or actions of governments and/or their central banks, including the Board of Governors of the Federal Reserve System in the U.S., the fund may be subject to a greater risk of principal decline from rising interest rates. When interest rates fall, the fund's investments in new securities may be at lower yields and

may reduce the fund's income. The magnitude of these fluctuations in the market price of fixed-income securities is generally greater for securities with longer effective maturities and durations because such instruments do not mature, reset interest rates or become callable for longer periods of time. The change in the value of a fixed-income security or portfolio can be approximated by multiplying its duration by a change in interest rates. For example, the market price of a fixed-income security with a duration of three years would be expected to decline 3% if interest rates rose 1%. Conversely, the market price of the same security would be expected to increase 3% if interest rates fell 1%. Risks associated with rising interest rates are heightened given that interest rates in the United States and other countries currently are at or near historic lows.

- *Credit risk.* Failure of an issuer of a security to make timely interest or principal payments when due, or a decline or perception of a decline in the credit quality of the security, can cause the security's price to fall. The lower a security's credit rating, the greater the chance that the issuer of the security will default or fail to meet its payment obligations.
- *High yield securities risk.* High yield ("junk") securities involve greater credit risk, including the risk of default, than investment grade securities, and are considered predominantly speculative with respect to the issuer's ability to make principal and interest payments. The prices of high yield securities can fall in response to bad news about the issuer or its industry, or the economy in general, to a greater extent than those of higher rated securities.
- *Derivatives risk.* A small investment in derivatives could have a potentially large impact on the fund's performance. The use of derivatives involves risks different from, or possibly greater than, the risks associated with investing directly in the underlying assets, and the fund's use of derivatives may result in losses to the fund. Derivatives in which the fund may invest can be highly volatile, illiquid and difficult to value, and there is the risk that changes in the value of a derivative held by the fund will not correlate with the underlying assets or the fund's other investments in the manner intended. Certain derivatives have the potential for unlimited loss, regardless of the size of the initial investment. Certain types of derivatives, including over-the-counter transactions, involve greater risks than the underlying assets because, in addition to general market risks, they are subject to liquidity risk, credit and counterparty risk (failure of the counterparty to the derivatives transaction to honor its obligation) and pricing risk (risk that the derivative cannot or will not be accurately valued). Future rules and regulations of the Securities and Exchange Commission (SEC) may require the fund to alter, perhaps materially, its use of derivatives.
- *Short position risk.* Short positions in securities may involve substantial risks. If a short position appreciates in value during the period of the fund's investment, there will be a loss to the fund that could be substantial. Short positions in stocks involve more risk than long positions in stocks because the maximum sustainable loss on a stock purchased is limited to the amount paid for the stock plus the transaction costs, whereas there is no maximum attainable price on the shorted stock. As such, theoretically, short positions in securities have unlimited risk.
- *Commodity sector risk.* Exposure to the commodities markets may subject the fund to greater volatility than investments in traditional securities. The values of commodities and commodity-linked investments are affected by events that might have less impact on the values of stocks and bonds. Investments linked to the prices of commodities are considered speculative. Because the value of a commodity-linked derivative instrument, such as a structured note, typically is based upon the price movements of physical commodities, the value of these securities will rise or fall in response to changes in the underlying commodities or related index of investment. Prices of commodities and commodity-linked investments may fluctuate significantly over short periods for a variety of factors, including: changes in supply and demand relationships, weather, agriculture, trade, fiscal, monetary and exchange control programs, disease, pestilence, acts of terrorism, embargoes, tariffs and international economic, political, military and regulatory developments.
- *Real estate sector risk.* The securities of issuers that are principally engaged in the real estate sector may be subject to risks similar to those associated with the direct ownership of real estate. These include: declines in real estate values; defaults by mortgagors or other borrowers and tenants; increases in property taxes and operating expenses; overbuilding; fluctuations in rental income; changes in interest rates; possible lack of availability of mortgage funds or financing; extended vacancies of properties; changes in tax and regulatory requirements (including zoning laws and environmental restrictions); losses due to costs resulting from the clean-up of environmental problems; liability to third parties for damages resulting from environmental problems; and casualty or condemnation losses. In addition, the performance of the economy in each of the regions and countries in which the real estate owned by a portfolio company is located affects occupancy, market rental rates and expenses and, consequently, has an impact on the income from such properties and their underlying values. Moreover, certain real estate investments may be illiquid and, therefore, the ability of real estate companies to reposition their portfolios promptly in response to changes in economic or other conditions is limited.
- *Infrastructure investments risk.* Companies engaged in infrastructure-related businesses are subject to a variety of factors that may adversely affect their business or operations, including: high amounts of leverage and high interest costs in connection with capital construction and improvement programs; difficulty in raising capital in adequate amounts on

reasonable terms in periods of high inflation and unsettled capital markets; inexperience with and potential losses resulting from the deregulation of a particular industry or sector; costs associated with compliance with and changes in environmental and other regulations; regulation or intervention by various government authorities, including government regulation of rates charged to customers; the imposition of special tariffs and changes in tax laws, regulatory policies and accounting standards; service interruption and/or legal challenges due to environmental, operational or other accidents; susceptibility to terrorist attacks; surplus capacity; increased competition; technological innovations that may render existing plants, equipment or products obsolete; and general changes in market sentiment towards infrastructure assets. There is also the risk that corruption may negatively affect publicly- funded infrastructure projects, especially in emerging markets, resulting in delays and cost overruns.

- *Leverage risk.* The use of leverage, such as entering into futures contracts, forward currency contracts, swaps or contracts for difference and engaging in forward commitment transactions, may magnify the fund's gains or losses.
- *Liquidity risk.* When there is little or no active trading market for specific types of securities, it can become more difficult to sell the securities in a timely manner at or near their perceived value. In such a market, the value of such securities and the fund's share price may fall dramatically, even during periods of declining interest rates. Investments that are illiquid or that trade in lower volumes may be more difficult to value. The market for below investment grade securities may be less liquid and therefore these securities may be harder to value or sell at an acceptable price, especially during times of market volatility or decline. Investments in foreign securities, particularly those of issuers located in emerging markets, tend to have greater exposure to liquidity risk than domestic securities. Liquidity risk also may refer to the risk that the fund will not be able to pay redemption proceeds within the allowable time period stated in this prospectus because of unusual market conditions, an unusually high volume of redemption requests, or other reasons. To meet redemption requests, the fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions, which may adversely affect the fund's share price.
- *High portfolio turnover risk.* The fund may engage in active and frequent trading, which could produce higher transaction costs and taxable distributions, and lower the fund's after-tax performance.
- *Non-diversification risk.* The fund is non-diversified, which means that the fund may invest a relatively high percentage of its assets in a limited number of issuers. Therefore, the fund's performance may be more vulnerable to changes in the market value of a single issuer or group of issuers and more susceptible to risks associated with a single economic, political or regulatory occurrence than a diversified fund.

Performance

As a new fund, past performance information is not available for the fund as of the date of this prospectus. Annual performance returns provide some indication of the risks of investing in the fund by showing changes in performance from year to year. Comparison of fund performance to an appropriate index indicates how the fund's average annual returns compare with those of a broad measure of market performance. The fund's designated broad-based securities market index is the Citi 1-Month Treasury Bill Index. The fund's past performance (before and after taxes) is not necessarily an indication of how the fund will perform in the future. Within a reasonable period of time after the fund commences operations, performance information will be available at www.dreyfus.com.

Portfolio Management

The fund's investment adviser is Dreyfus and the fund's sub-adviser is Pareto Investment Management Limited, a wholly-owned subsidiary of Insight Investment Management Limited and an affiliate of Dreyfus.

Matthew Merritt, Steve Waddington and Michael Ford are the fund's primary portfolio managers, positions they have held since the fund's inception in November 2017. Messrs. Merritt, Waddington and Ford are portfolio managers on the sub-adviser's multi-asset strategy team, of which Mr. Merritt is the head.

Purchase and Sale of Fund Shares

In general, for each share class, other than Class Y, the fund's minimum initial investment is \$1,000 and the minimum subsequent investment is \$100. For Class Y shares, the minimum initial investment generally is \$1,000,000, with no minimum subsequent investment. You may sell (redeem) your shares on any business day by calling 1-800-DREYFUS (inside the U.S. only) or by visiting www.dreyfus.com. If you invested in the fund through a third party, such as a bank, broker-dealer or financial adviser, or through a Retirement Plan (as defined below), you may mail your request to sell shares to Dreyfus Institutional Department, P.O. Box 9882, Providence, Rhode Island 02940-8082. If you invested directly through the fund, you may mail your request to sell shares to Dreyfus Shareholder Services, P.O. Box 9879, Providence, Rhode Island 02940-8079. If you are an Institutional Direct account holder, please contact your BNY Mellon relationship manager for instructions.

Retirement Plans include qualified or non-qualified employee benefit plans, such as 401(k), 403(b)(7), Keogh, pension, profit-sharing and other deferred compensation plans, whether established by corporations, partnerships, sole proprietorships, non-profit entities, trade or labor unions, or state and local governments, but do not include IRAs (including, without limitation, traditional IRAs, Roth IRAs, Coverdell Education Savings Accounts, IRA "Rollover Accounts" or IRAs set up under Simplified Employee Pension Plans (SEP-IRAs), Salary Reduction Simplified Employee Pension Plans (SARSEPs) or Savings Incentive Match Plans for Employees (SIMPLE IRAs)).

Tax Information

The fund's distributions are taxable as ordinary income or capital gains, except when your investment is through an IRA, Retirement Plan or other U.S. tax-advantaged investment plan (in which case you may be taxed upon withdrawal of your investment from such account).

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares (other than Class Y shares) through a broker-dealer or other financial intermediary (such as a bank), the fund and its related companies may pay the intermediary for the sale of fund shares and related services. To the extent that the intermediary may receive lesser or no payments in connection with the sale of other investments, the payments from the fund and its related companies may create a potential conflict of interest by influencing the broker-dealer or other intermediary and your financial representative to recommend the fund over the other investments. This potential conflict of interest may be addressed by policies, procedures or practices adopted by the financial intermediary. As there may be many different policies, procedures or practices adopted by different intermediaries to address the manner in which compensation is earned through the sale of investments or the provision of related services, the compensation rates and other payment arrangements that may apply to a financial intermediary and its representatives may vary by intermediary. Ask your financial representative or visit your financial intermediary's website for more information.

Fund Details

Goal and Approach

The fund seeks total return (consisting of capital appreciation and income). The fund's objective may be changed by the fund's board upon 60 days' prior notice to shareholders. To pursue its goal, the fund normally allocates its assets among a broad range of asset classes, including equities, fixed income, currencies, real estate, listed infrastructure and commodities, in developed and emerging markets. The fund will seek to gain exposure to various asset classes, including real estate, listed infrastructure and commodities, through direct investments in securities or derivative instruments and by investing in other investment companies (underlying funds), including exchange-traded funds (ETFs).

The fund's sub-adviser, Pareto Investment Management Limited, a wholly-owned subsidiary of Insight Investment Management Limited and an affiliate of Dreyfus, generally invests the fund's assets according to its view of macroeconomic themes, using the following investment strategies:

- **Directional Strategies:** For example, the sub-adviser may take the view that a particular U.S. equity market (e.g., large-cap stocks) will increase in value over the near term and, accordingly, may allocate fund assets by taking a long position in a U.S. large-cap equity market index future, or otherwise seek to identify large-cap stock investment opportunities.
- **Relative Value Strategies:** For example, the sub-adviser may take the view that large-cap companies will have positive performance and small-cap companies will have negative performance over the near term and, accordingly, may allocate fund assets by taking a long position in a U.S. large-cap equity market index future and a short position in a small-cap equity market index future, or otherwise seek to identify long/short investment opportunities.
- **Non-linear Strategies:** For example, the sub-adviser may take a view on market volatility and, accordingly, may allocate fund assets to exchange-traded or over-the-counter options that seek to capture range bound or breakout scenarios in market values (i.e., identifying price trends that indicate upper and lower price boundaries over a given time period and trading to take advantage when the stock "breaks out" of the boundary), or otherwise seek to identify opportunities to take advantage of volatility using derivative instruments.

The fund's sub-adviser dynamically adjusts the allocation of the fund's investments in seeking to opportunistically take advantage of investment strategies that are particularly attractive at the time of implementation, while limiting downside risk and volatility over a market cycle (typically five years).

The fund's sub-adviser has considerable latitude in allocating the fund's investments among a broad range of asset classes and has the discretion, subject to the approval of the fund's board, to add additional investment strategies or asset classes when it is deemed necessary. The investment strategy and asset allocations are set by the fund's portfolio management team and reviewed regularly by the sub-adviser's multi-asset strategy team independent governance committee, which also is responsible, subject to Dreyfus' supervision, for investment risk oversight of the fund's portfolio and of the individual investment strategies in which the fund's assets are allocated. The fund's sub-adviser may vary the amount of the fund's assets allocated to a particular investment strategy or asset class depending on market conditions, including maintaining zero exposure to an investment strategy or asset class. The sub-adviser assesses whether particular investments or investment strategies have delivered the returns expected of them and/or whether the investment environment has shifted to the point where the investment or strategy is no longer suitable for the fund. This process can trigger a decision as to whether to sell or hold a particular investment. Any changes to the investment strategies or asset allocations may be implemented over a reasonable period of time so as to minimize disruptive effects and added costs to the fund.

The fund is not managed to a benchmark index, nor will the fund's portfolio have the same characteristics as its designated broad-based securities market index — the Citi 1-Month Treasury Bill Index. Although the fund is not managed to a benchmark index, the fund will seek to provide a minimum average annual total return of USD 1-Month LIBOR plus 4.5%, before fees and expenses, over a five-year period. In seeking to achieve this target return, the fund's sub-adviser selects investment strategies and asset classes based on its view of macroeconomic themes at the time of investment. There is no assurance, however, that the fund will be able to provide such returns or positive returns, and an investor may lose money by investing in the fund.

The composition of the fund's investment portfolio will vary over time, based on the allocation to the investment strategies and the fund's exposure to the various asset classes. The fund may invest directly, through derivative instruments or through an underlying fund in the securities of U.S. and foreign issuers, including securities of issuers in developed and emerging market countries and securities denominated in a currency other than the U.S. dollar, securities of issuers of any market capitalization, and securities of any credit quality (including "investment grade," "high yield" or "junk" bonds), maturity or duration. The fund may hold a significant portion of its assets in U.S. government securities, high quality debt securities, money market instruments, cash and other cash equivalents to collateralize its derivatives positions, pending investment or allocation to an asset class, to manage purchase and redemption activity, or for defensive purposes. The fund considers emerging market countries to be those countries defined as having an emerging or developing economy by the World Bank or its related organizations, or the United Nations or its authorities. The fund considers securities issued by companies organized or with their principal place of business, or majority of assets or business, in emerging market countries to be emerging market issuers. There is no minimum or maximum investment amount that the fund may invest in any particular country or region. The fund may invest in affiliated and unaffiliated underlying funds. Some of the underlying funds in which the fund may invest may not be registered as investment companies under the Investment Company Act of 1940, as amended. The fund may purchase securities offered in initial public offerings (IPOs) or shortly thereafter. The fund may invest up to 15% of its net assets in illiquid securities, which are those that cannot be disposed of in seven days in the ordinary course of business at approximately the price at which the fund values the investment.

The fund's equity investments principally are common stocks, but such investments may, either directly, through derivative instruments or through an underlying fund, include: preferred stocks, convertible securities and warrants; Depositary Receipts (DRs), such as American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs), which are securities that represent ownership interests in the publicly-traded securities of non-U.S. issuers; participatory notes issued by banks, broker/dealers and other financial institutions, which are designed to replicate, or otherwise provide exposure to, the performance of certain issuers and markets; and securities issued by real estate investment trusts (REITs), which are pooled investment vehicles that invest primarily in income-producing real estate or loans related to real estate, and real-estate operating companies.

The fixed-income securities in which the fund may invest, either directly, through derivative instruments or through an underlying fund, include principally bonds, debentures, notes (including credit-linked notes and other structured notes and investments), mortgage-related securities, asset-backed securities, collateralized debt obligations (CDOs), which include collateralized bond obligations (CBOs) and collateralized loan obligations (CLOs), loans, convertible securities, Eurodollar and Yankee dollar instruments, preferred stocks and money market instruments. The fund may invest, either directly, through derivative instruments or through an underlying fund, in floating rate loans and other floating rate securities, including senior secured floating rate loans, second lien loans, senior unsecured loans and subordinated secured and unsecured loans and debt obligations, including loan participation notes (LPNs). LPNs are interests in loans or other direct debt instruments relating to amounts owed by a corporate, governmental or other borrower to another party and generally are issued through special purpose vehicles sponsored by banks, broker-dealers or other financial firms. LPNs are the predominant form of corporate debt financing in certain emerging markets, particularly in Russia. The fund may invest in exchange-traded notes (ETNs), which are debt securities typically designed to track the performance of an index. The fixed-income securities in which the fund may invest, either directly, through derivative instruments or through an underlying fund, may be issued by U.S. and foreign corporations or entities; U.S. and foreign banks; the U.S. government, its agencies, authorities, instrumentalities or sponsored enterprises; state and municipal governments; and foreign governments and their political subdivisions and Brady bonds. These securities may have all types of interest rate payment and reset terms, including fixed rate, adjustable rate, floating rate, zero coupon, contingent, deferred, payment in kind and auction rate features. The fixed-income securities in which the fund may invest, either directly, through derivative instruments or through an underlying fund, may be rated investment grade or below investment grade ("high yield" or "junk" bonds) by one or more nationally recognized statistical rating organizations, or, if unrated, determined to be of comparable quality by the fund's sub-adviser. Emerging market countries in which the fund may invest, either directly or through an underlying fund, may have sovereign ratings that are below investment grade or are unrated. The fund may invest without limitation in non-investment grade securities. There are no restrictions on the dollar-weighted average maturity or duration of the fund's portfolio.

The fund will use a significant degree of derivative instruments, to the extent permitted under the Investment Company Act of 1940, as amended, as a substitute for investing directly in an underlying asset, as an alternative to selling a security short, to increase returns, to manage foreign currency, credit or interest rate risk, to manage effective maturity or duration, as part of a hedging strategy, or for other purposes related to the management of the fund. These instruments may include principally options, futures and options on futures (including those relating to securities, foreign currencies, indices and interest rates), forward contracts (including foreign currency forward contracts), swaps (including total return, equity, currency, interest rate and credit default swaps), options on swaps, contracts for difference, and other derivative instruments (including commodity-linked instruments, such as structured notes).

Derivatives may be entered into on established exchanges or through privately negotiated transactions referred to as over-the-counter derivatives. A derivatives contract will obligate or entitle the fund to deliver or receive an asset or cash payment based on the change in value of the underlying asset. When the fund enters into derivatives transactions, it may be required to segregate liquid assets or enter into offsetting positions or otherwise cover its obligations, in accordance with applicable regulations, while the positions are open. In the case of swaps, futures contracts, options, forward contracts and other derivative instruments that provide for full payment of the value of the underlying asset, in cash or by physical delivery, at the settlement date, for example, the fund may be required to set aside liquid assets equal to the full notional amount of the instrument (generally, the total numerical value of the asset underlying the derivatives contract) while the positions are open, to the extent there is not an offsetting position. However, with respect to certain swaps, futures contracts, options, forward contracts and other derivative instruments that require periodic cash settlement during the term of the transaction or cash payment of the gain or loss under the transaction at the settlement date, the fund may segregate liquid assets in an amount equal to the fund's daily marked-to-market net obligations (i.e., the fund's daily net liability) under the instrument, if any, rather than its full notional amount. By setting aside assets equal to only the fund's net obligations under the instrument, the fund will have the ability to employ leverage to a greater extent than if the fund were required to segregate liquid assets equal to the full notional value of such instruments. The fund may enter into, modify or amend agreements with third party financial institutions regarding certain derivatives contracts that provide for physical delivery of the underlying asset to require such contracts to be settled through cash payment of the marked-to-market net obligation under the contract, if any.

The fund may write (sell) call and put options and purchase put and call options. A put option gives the purchaser of the option the right to sell, and the writer (seller) of the option the obligation to buy, the underlying instrument during the option period at a specified price. A call option gives the purchaser of the option the right to buy, and the writer (seller) of the option the obligation to sell, the underlying instrument during the option period at a specified price. Options written or purchased by the fund may be traded on either U.S. or foreign exchanges or over-the-counter.

Futures contracts generally are standardized, exchange-traded contracts that provide for the sale or purchase of a specified financial instrument, index or currency at a future time at a specified price. An option on a futures contract gives the purchaser the right (and the writer of the option the obligation) to assume a position in a futures contract at a specified exercise price within a specified period of time. The fund may engage in futures transactions on both U.S. and foreign exchanges. A forward currency contract involves an obligation to purchase or sell a specific currency at a future date at a price set at the time of the contract.

Swap agreements may be used to obtain exposure to a security or market without owning or taking physical custody of such security or investing directly in such market, and can be used to transfer the interest rate or credit risk of a security without actually transferring ownership of the security or to customize exposure to particular corporate credit. Total return swaps are contracts in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security, basket of securities or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Equity swaps allow the parties to the swap agreement to exchange the dividend income or other components of return on an equity investment or basket of equity securities or equity securities index for a component of return on another non-equity or equity investment. Currency swaps involve the exchange of the parties' respective rights to make or receive payments in specified currencies. Interest rate swaps involve the exchange by the fund with another party of their respective commitments to pay or receive interest, such as an exchange of fixed-rate payments for floating rate payments. Credit default swaps involve the receipt of floating or fixed rate payments in exchange for assuming potential credit losses on an underlying security. Credit default swaps give one party to a transaction (the buyer of the credit swap) the right to dispose of or acquire an asset (or group of assets or issuers or exposure to the performance of an index), or the right to receive a payment from the other party, upon the occurrence of specified credit events. For example, when the fund is the buyer of a credit default swap (commonly known as buying protection), it may make periodic payments to the seller of the credit default swap to obtain protection against a credit default on a specified underlying asset (or group of assets). If a default occurs, the seller of a credit default swap may be required to pay the fund the notional amount of the credit default swap on a specified security (or group of securities). On the other hand, when the fund is a seller of a credit default swap (commonly known as selling protection), in addition to the credit exposure the fund has on the other assets held in its portfolio, the fund is also subject to the credit exposure on the notional amount of the swap since, in the event of a credit default, the fund may be required to pay the notional amount of the credit default swap on a specified security (or group of securities) to the buyer of the credit default swap. Contracts for difference generally are used to obtain long or short exposure to securities or a securities index without owning or taking physical custody of such securities. The fund also may use actual long and short futures positions and achieve similar market exposure by netting the payment obligations of the two contracts.

The fund expects to maintain significant short positions, principally through investments in derivative instruments such as futures, options, forward contracts, swap agreements and contracts for difference on market indices, currencies,

sectors and individual securities. The fund also may maintain short positions for hedging purposes, such as to limit exposure to a possible market decline in the value of its portfolio securities. In addition, the fund may take a short position in an asset class by selling short shares of an ETF or ETN that invests in the subject asset class. When taking short positions with respect to securities through investments in derivative instruments, the sub-adviser generally is expecting the value of the securities subject to the short to fall during the period of the fund's investment exposure. However, the fund will incur a loss on a short position in respect of a security if the price of the security subject to the short increases between the date the fund establishes the short position and the date the fund closes out the short position. When taking a short position, the fund's potential loss is the maximum attainable price of the security less the price at which the fund's position in the security was established.

The fund also may make forward commitments in which the fund agrees to buy or sell a security in the future at an agreed upon price. The fund also may invest in structured notes (i.e., specially designed debt instruments whose return is determined by reference to an index, security or commodity). For example, the fund may gain exposure to commodities markets by investing in commodity-linked or index-linked structured notes, which are structured by the issuer and the purchaser of the note whose principal and/or coupon payments are linked to commodities or commodity indices, and commodity-related ETFs or ETNs. The fund may invest in equity-linked notes (ELNs), which are securities that are valued based upon the performance of one or more equity securities traded in a foreign market, such as a stock index, a group of stocks or a single stock. ELNs offer investors the opportunity to participate in the ownership of the underlying local equity securities where the fund may not have established local access to that market.

The fund also may invest in CDOs, which include CBOs, CLOs and other similarly structured securities. CBOs and CLOs are types of asset-backed securities. A CBO is a trust which is backed by a diversified pool of high risk, below investment grade fixed-income securities. A CLO is a trust typically collateralized by a pool of loans, which may include, among others, domestic and foreign senior secured loans, senior unsecured loans, and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. For both CBOs and CLOs, the cash flows from the trust are split into two or more portions, called tranches, varying in risk and yield. The riskiest portion is the "equity" tranche which is subordinate to the other tranches in the event of defaults from the loans in the trust. Senior tranches typically have higher ratings and lower yields than the CBO's or CLO's underlying securities and subordinated tranches, and may be rated investment grade. The ratings reflect both the credit quality of underlying collateral as well as how much protection a given tranche is afforded by tranches that are subordinate to it. CDOs may charge management fees and other administrative expenses. Normally, CBOs, CLOs and other CDOs are privately offered and sold, and thus, are not registered under the securities laws and may be characterized by the fund as illiquid securities.

The fund may invest in mortgage-backed securities. Mortgage-backed securities represent direct or indirect participations in, or are collateralized by and payable from, mortgage loans secured by real property. The fund may invest in agency or non-agency mortgage-backed securities, including privately-issued mortgage pass-through securities, which generally offer a higher yield than similar securities issued by a government entity because of the absence of any direct or indirect government or agency payment guarantees. These mortgage-related securities typically do not have the same credit standing as U.S. government guaranteed mortgage-backed securities. In addition, some mortgage-related securities issued by private organizations may not be readily marketable, may be more difficult to value accurately and may be more volatile than similar securities issued by a government entity.

The fund may invest in other asset-backed securities. Such asset-backed securities are securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, installment contracts and personal property, as well as home equity line of credit loans and other second-lien mortgages. Asset-backed securities may also be subject to increased volatility and may become illiquid and more difficult to value.

The fund does not have any limitations regarding portfolio turnover. The fund may engage in short-term trading to try to achieve its objective and may have portfolio turnover rates in excess of 100%. A portfolio turnover of 100% is equivalent to the fund buying and selling all of the securities in its portfolio once during the course of a year.

The fund is non-diversified.

Investment Risks

An investment in the fund is not a bank deposit. It is not insured or guaranteed by the FDIC or any other government agency. It is not a complete investment program. The value of your investment in the fund will fluctuate, sometimes dramatically, which means you could lose money.

- *Allocation risk.* The ability of the fund to achieve its investment goal depends, in part, on the ability of the fund's sub-adviser to allocate effectively the fund's assets among the investment strategies and asset classes. There can be no assurance that the actual allocations will be effective in achieving the fund's investment goal. In addition, if one

strategy buys a security during a time frame when another strategy sells it or holds a short position in the security, the fund will incur transaction costs and the fund's net position in the security may be approximately the same as it would have been with a single strategy and no such portfolio transactions or if none of the strategies had held such security or taken such position.

- *Correlation risk.* Because the fund allocates its investments among different asset classes, the fund is subject to correlation risk. Although the prices of equity securities and fixed-income securities, as well as other asset classes, often rise and fall at different times so that a fall in the price of one may be offset by a rise in the price of the other, in down markets the prices of these securities and asset classes can also fall in tandem.
- *Issuer risk.* A security's market value may decline for a number of reasons which directly relate to the issuer, such as management performance, financial leverage and reduced demand for the issuer's products or services, or factors that affect the issuer's industry, such as labor shortages or increased production costs and competitive conditions within an industry.
- *Market sector risk.* The fund may significantly overweight or underweight certain countries, companies, industries or market sectors, which may cause the fund's performance to be more or less sensitive to developments affecting those countries, companies, industries or sectors.
- *Risks of stock investing.* Stocks generally fluctuate more in value than bonds and may decline significantly over short time periods. There is the chance that stock prices overall will decline because stock markets tend to move in cycles, with periods of rising prices and falling prices. The market value of a stock may decline due to general market conditions that are not related to the particular company, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. A security's market value also may decline because of factors that affect the particular company, such as management performance, financial leverage and reduced demand for the company's products or services, or factors that affect the company's industry, such as labor shortages or increased production costs and competitive conditions within an industry.
- *Fixed-income market risk.* The market value of a fixed-income security may decline due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. The fixed-income securities market can be susceptible to increases in volatility and decreases in liquidity. Liquidity can decline unpredictably in response to overall economic conditions or credit tightening. Increases in volatility and decreases in liquidity may be caused by a rise in interest rates (or the expectation of a rise in interest rates), which currently are at or near historic lows in the United States and in other countries. During periods of reduced market liquidity, the fund may not be able to readily sell fixed-income securities at prices at or near their perceived value. If the fund needed to sell large blocks of fixed-income securities to meet shareholder redemption requests or to raise cash, those sales could further reduce the prices of such securities. An unexpected increase in fund redemption requests, including requests from shareholders who may own a significant percentage of the fund's shares, which may be triggered by market turmoil or an increase in interest rates, could cause the fund to sell its holdings at a loss or at undesirable prices and adversely affect the fund's share price and increase the fund's liquidity risk, fund expenses and/or taxable distributions. Economic and other market developments can adversely affect fixed-income securities markets. Regulations and business practices, for example, have led some financial intermediaries to curtail their capacity to engage in trading (i.e., "market making") activities for certain fixed-income securities, which could have the potential to decrease liquidity and increase volatility in the fixed-income securities markets. Policy and legislative changes worldwide are affecting many aspects of financial regulation. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time.
- *ETF and other investment company risk.* To the extent the fund invests in pooled investment vehicles, such as ETFs and other investment companies, the fund will be affected by the investment policies, practices and performance of such entities in direct proportion to the amount of assets the fund has invested therein. The risks of investing in other investment companies, including ETFs, typically reflect the risks associated with the types of instruments in which the investment companies invest. When the fund invests in an ETF or other investment company, shareholders of the fund will bear indirectly their proportionate share of the expenses of the ETF or other investment company (including management fees) in addition to the expenses of the fund. ETFs are exchange-traded investment companies that are, in many cases, designed to provide investment results corresponding to an index. The value of the underlying securities can fluctuate in response to activities of individual companies or in response to general market and/or economic conditions. Additional risks of investments in ETFs include: (i) the market price of an ETF's shares may trade at a discount to its net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; or (iii) trading may be halted if the listing exchanges' officials deem such action appropriate, the shares are delisted from the exchange, or the activation of market-wide "circuit breakers" (which are tied to large decreases in stock prices) halts trading generally. The fund will incur brokerage costs when purchasing and selling shares of ETFs.

- *Foreign investment risk.* To the extent the fund invests in foreign securities, the fund's performance will be influenced by political, social and economic factors affecting investments in foreign issuers. Special risks associated with investments in foreign issuers include exposure to currency fluctuations, less liquidity, less developed or less efficient trading markets, lack of comprehensive company information, political and economic instability and differing auditing and legal standards. Investments denominated in foreign currencies are subject to the risk that such currencies will decline in value relative to the U.S. dollar and affect the value of these investments held by the fund. To the extent the fund's investments are focused in a limited number of foreign countries, the fund's performance could be more volatile than that of more geographically diversified funds.
- *Emerging market risk.* The securities of issuers located or doing substantial business in emerging market countries tend to be more volatile and less liquid than the securities of issuers located in countries with more mature economies, potentially making prompt liquidation at an attractive price difficult. In addition, such securities may be below investment grade quality and predominantly speculative. The economies of countries with emerging markets may be based predominantly on only a few industries, may be highly vulnerable to changes in local or global trade conditions, and may suffer from extreme debt burdens or volatile inflation rates. Transaction settlement and dividend collection procedures also may be less reliable in emerging markets than in developed markets. Emerging markets generally have less diverse and less mature economic structures and less stable political systems than those of developed countries. Investments in these countries may be subject to political, economic, legal, market and currency risks. The risks may include less protection of property rights and uncertain political and economic policies, the imposition of capital controls and/or foreign investment limitations by a country, nationalization of businesses and the imposition of sanctions by other countries, such as the United States. For example, in response to recent political and military actions undertaken by Russia, the United States and certain other countries, as well as the European Union, have instituted economic sanctions against certain Russian individuals and companies. The political and economic situation in Russia, and the current and any future sanctions or other government actions against Russia may result in the decline in the value and liquidity of Russian securities, devaluation of Russian currency, a downgrade in Russia's credit rating, the inability to freely trade the securities of sanctioned companies (either due to the sanctions imposed or related operational issues) and/or other adverse consequences to the Russian economy, any of which could negatively impact a fund's investments in Russian securities.
- *Foreign government obligations and securities of supranational entities risk.* Investing in foreign government obligations, debt obligations of supranational entities and the sovereign debt of foreign countries, including emerging market countries, creates exposure to the direct or indirect consequences of political, social or economic changes in the countries that issue the securities or in which the issuers are located. The ability and willingness of sovereign obligors or the governmental authorities that control repayment of their debt to pay principal and interest on such debt when due may depend on general economic and political conditions within the relevant country. Certain countries in which the fund may invest have historically experienced, and may continue to experience, high rates of inflation, high interest rates and extreme poverty and unemployment. Some of these countries are also characterized by political uncertainty or instability. Additional factors which may influence the ability or willingness of a foreign government or country to service debt include a country's cash flow situation, the availability of sufficient foreign exchange on the date a payment is due, the relative size of its debt service burden to the economy as a whole and its government's policy towards the International Monetary Fund, the International Bank for Reconstruction and Development and other international agencies. The ability of a foreign sovereign obligor to make timely payments on its external debt obligations also will be strongly influenced by the obligor's balance of payments, including export performance, its access to international credit and investments, fluctuations in interest rates and the extent of its foreign reserves. A governmental obligor may default on its obligations. Some sovereign obligors have been among the world's largest debtors to commercial banks, other governments, international financial organizations and other financial institutions. These obligors, in the past, have experienced substantial difficulties in servicing their external debt obligations, which led to defaults on certain obligations and the restructuring of certain indebtedness.
- *Foreign currency risk.* Investments in foreign currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar or, in the case of hedged positions, that the U.S. dollar will decline relative to the currency being hedged. Currency exchange rates may fluctuate significantly over short periods of time. Foreign currencies, particularly the currencies of emerging market countries, are also subject to risks caused by inflation, interest rates, budget deficits and low savings rates, political factors and government intervention and controls.
- *Interest rate risk.* Prices of bonds and other fixed rate fixed-income securities tend to move inversely with changes in interest rates. Typically, a rise in rates will adversely affect fixed-income securities and, accordingly, will cause the value of the fund's investments in these securities to decline. During periods of very low interest rates, which occur from time to time due to market forces or actions of governments and/or their central banks, including the Board of Governors of the Federal Reserve System in the U.S., the fund may be subject to a greater risk of principal decline from rising interest rates. When interest rates fall, the values of already-issued fixed rate fixed-income securities generally rise. However, when interest rates fall, the fund's investments in new securities may be at lower yields and

may reduce the fund's income. The magnitude of these fluctuations in the market price of fixed-income securities is generally greater for securities with longer effective maturities and durations because such instruments do not mature, reset interest rates or become callable for longer periods of time. The change in the value of a fixed-income security or portfolio can be approximated by multiplying its duration by a change in interest rates. For example, the market price of a fixed-income security with a duration of three years would be expected to decline 3% if interest rates rose 1%. Conversely, the market price of the same security would be expected to increase 3% if interest rates fell 1%. Risks associated with rising interest rates are heightened given that interest rates in the United States and other countries currently are at or near historic lows. In the event that the fund has a negative average effective duration, the value of the fund may decline in a declining interest rate environment. Unlike investment grade bonds, however, the prices of high yield ("junk") bonds may fluctuate unpredictably and not necessarily inversely with changes in interest rates. Interest rate changes may have different effects on the values of mortgage-related securities because of prepayment and extension risks. In addition, the rates on floating rate instruments adjust periodically with changes in market interest rates. Although these instruments are generally less sensitive to interest rate changes than fixed rate instruments, the value of floating rate loans and other floating rate securities may decline if their interest rates do not rise as quickly, or as much, as general interest rates.

- *Credit risk.* Failure of an issuer of a security to make timely interest or principal payments when due, or a decline or perception of a decline in the credit quality of the security, can cause the security's price to fall, lowering the value of the fund's investment in such security. The lower a security's credit rating, the greater the chance that the issuer of the security will default or fail to meet its payment obligations.
- *High yield securities risk.* High yield ("junk") securities involve greater credit risk, including the risk of default, than investment grade securities, and are considered predominantly speculative with respect to the issuer's ability to make principal and interest payments. The prices of high yield securities can fall in response to bad news about the issuer or its industry, or the economy in general, to a greater extent than those of higher rated securities. Securities rated investment grade when purchased by the fund may subsequently be downgraded.
- *Derivatives risk.* A small investment in derivatives could have a potentially large impact on the fund's performance. The use of derivatives involves risks different from, or possibly greater than, the risks associated with investing directly in the underlying assets, and the fund's use of derivatives may result in losses to the fund and increased portfolio volatility. Derivatives in which the fund may invest can be highly volatile, illiquid and difficult to value, and there is the risk that changes in the value of a derivative held by the fund will not correlate with the underlying assets or the fund's other investments in the manner intended. Derivative instruments, such as over-the-counter swap agreements, forward contracts and other over-the-counter transactions, also involve the risk that a loss may be sustained as a result of the failure of the counterparty to the derivative instruments to make required payments or otherwise comply with the derivative instruments' terms. Many of the regulatory protections afforded participants on organized exchanges for futures contracts and exchange-traded options, such as the performance guarantee of an exchange clearing house, are not available in connection with over-the-counter derivative transactions. Certain derivatives, such as written call options, have the potential for unlimited loss, regardless of the size of the initial investment. Certain types of derivatives, including over-the-counter transactions, involve greater risks than the underlying assets because, in addition to general market risks, they are subject to liquidity risk, credit and counterparty risk (failure of the counterparty to the derivatives transaction to honor its obligation) and pricing risk (risk that the derivative cannot or will not be accurately valued). If a derivative transaction is particularly large or if the relevant market is illiquid (as is the case with many privately-negotiated derivatives, including swap agreements), it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price. Future rules and regulations of the Securities and Exchange Commission (SEC) may require the fund to alter, perhaps materially, its use of derivatives. In such an event, the fund's ability to pursue one or more of the investment strategies described in this prospectus may be impaired and, as a result, the fund may seek to pursue different investment strategies or otherwise alter or discontinue its investment operations.
- *Short position risk.* Short positions in securities may involve substantial risks. If a short position appreciates in value during the period of the fund's investment, there will be a loss to the fund that could be substantial. Short positions in stocks involve more risk than long positions in stocks because the maximum sustainable loss on a stock purchased is limited to the amount paid for the stock plus the transaction costs, whereas there is no maximum attainable price on the shorted stock. As such, theoretically, short positions in securities have unlimited risk. There is a risk that the fund may be unable to fully implement its investment strategy due to a lack of available swap or other derivatives arrangements or securities to borrow to effect short sales or for some other reason. In addition, the fund may not always be able to close out a short position at a particular time or at an acceptable price. It is possible that the market value of the securities the fund holds in long positions will decline at the same time that the market value of the securities as to which the fund has short exposure increases, thereby increasing the fund's potential volatility.

- *Commodity sector risk.* Exposure to the commodities markets may subject the fund to greater volatility than investments in traditional securities. The values of commodities and commodity-linked investments are affected by events that might have less impact on the values of stocks and bonds. Investments linked to the prices of commodities are considered speculative. Because the value of a commodity-linked derivative instrument, such as a structured note, typically is based upon the price movements of physical commodities, the value of these securities will rise or fall in response to changes in the underlying commodities or related index of investment. Prices of commodities and commodity-linked investments may fluctuate significantly over short periods for a variety of factors, including: changes in supply and demand relationships, weather, agriculture, trade, fiscal, monetary and exchange control programs, disease, pestilence, acts of terrorism, embargoes, tariffs and international economic, political, military and regulatory developments. The commodity markets are subject to temporary distortions or other disruptions due to a variety of factors, including the lack of liquidity in the markets, the participation of speculators and government regulation and intervention.
- *Real estate sector risk.* The securities of issuers that are principally engaged in the real estate sector may be subject to risks similar to those associated with the direct ownership of real estate. These include: declines in real estate values; defaults by mortgagors or other borrowers and tenants; increases in property taxes and operating expenses; overbuilding; fluctuations in rental income; changes in interest rates; possible lack of availability of mortgage funds or financing; extended vacancies of properties; changes in tax and regulatory requirements (including zoning laws and environmental restrictions); losses due to costs resulting from the clean-up of environmental problems; liability to third parties for damages resulting from environmental problems; and casualty or condemnation losses. In addition, the performance of the economy in each of the regions and countries in which the real estate owned by a portfolio company is located affects occupancy, market rental rates and expenses and, consequently, has an impact on the income from such properties and their underlying values. Moreover, certain real estate investments may be illiquid and, therefore, the ability of real estate companies to reposition their portfolios promptly in response to changes in economic or other conditions is limited.
- *Infrastructure investments risk.* Companies engaged in infrastructure-related businesses are subject to a variety of factors that may adversely affect their business or operations, including: high amounts of leverage and high interest costs in connection with capital construction and improvement programs; difficulty in raising capital in adequate amounts on reasonable terms in periods of high inflation and unsettled capital markets; inexperience with and potential losses resulting from the deregulation of a particular industry or sector; costs associated with compliance with and changes in environmental and other regulations; regulation or intervention by various government authorities, including government regulation of rates charged to customers; the imposition of special tariffs and changes in tax laws, regulatory policies and accounting standards; service interruption and/or legal challenges due to environmental, operational or other accidents; susceptibility to terrorist attacks; surplus capacity; increased competition; technological innovations that may render existing plants, equipment or products obsolete; and general changes in market sentiment towards infrastructure assets. There is also the risk that corruption may negatively affect publicly- funded infrastructure projects, especially in emerging markets, resulting in delays and cost overruns.
- *Leverage risk.* The use of leverage, such as entering into futures contracts, forward currency contracts, swaps or contracts for difference and engaging in forward commitment transactions, may magnify the fund's gains or losses. Because many derivatives have a leverage component, adverse changes in the value of the underlying asset can result in a loss substantially greater than the amount invested in the derivative itself.
- *Liquidity risk.* When there is little or no active trading market for specific types of securities, it can become more difficult to sell the securities in a timely manner at or near their perceived value. In such a market, the value of such securities and the fund's share price may fall dramatically, even during periods of declining interest rates. Other market developments can adversely affect fixed-income securities markets. Regulations and business practices, for example, have led some financial intermediaries to curtail their capacity to engage in trading (i.e., "market making") activities for certain fixed-income securities, which could have the potential to decrease liquidity and increase volatility in the fixed-income securities markets. Investments that are illiquid or that trade in lower volumes may be more difficult to value. The market for below investment grade securities may be less liquid and therefore these securities may be harder to value or sell at an acceptable price, especially during times of market volatility or decline. Investments in foreign securities, particularly those of issuers located in emerging markets, tend to have greater exposure to liquidity risk than domestic securities. No active trading market may exist for some of the floating rate loans in which the fund invests and certain loans may be subject to restrictions on resale. Because some floating rate loans that the fund invests in may have a more limited secondary market, liquidity risk is more pronounced for the fund than for mutual funds that invest primarily in other types of fixed-income instruments or equity securities. Liquidity can decline unpredictably in response to overall economic conditions or credit tightening. Increases in volatility and decreases in liquidity may be caused by a rise in interest rates (or the expectation of a rise in interest rates). Liquidity risk also may refer to the risk that the fund will not be able to pay redemption proceeds within the allowable time period stated in this prospectus because of unusual market conditions, an unusually high volume of

redemption requests, or other reasons. To meet redemption requests, the fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions, which may adversely affect the fund's share price.

- *High portfolio turnover risk.* The fund may engage in active and frequent trading, which could produce higher transaction costs and taxable distributions, and lower the fund's after-tax performance.
- *Non-diversification risk.* The fund is non-diversified, which means that the fund may invest a relatively high percentage of its assets in a limited number of issuers. Therefore, the fund's performance may be more vulnerable to changes in the market value of a single issuer or group of issuers and more susceptible to risks associated with a single economic, political or regulatory occurrence than a diversified fund.

In addition to the principal risks described above, the fund is subject to the following additional risks that are not anticipated to be principal risks of investing in the fund:

- *Market capitalization risk (small-, mid- and large-cap stock risk).* To the extent the fund emphasizes small-, mid- or large-cap stocks, it will assume the associated risks. At any given time, any of these market capitalizations may be out of favor with investors. Compared to small- and mid-cap companies, large-cap companies may be less responsive to changes and opportunities affecting their business. To the extent the fund invests in small- and mid-cap companies, it will be subject to additional risks because the operating histories of these companies tend to be more limited, their earnings and revenues less predictable (and some companies may be experiencing significant losses), and their share prices more volatile than those of larger, more established companies. The shares of smaller companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the fund's ability to sell these securities. Smaller companies may have limited product lines, markets or financial resources, or may depend on a limited management group. Some of the fund's investments will rise and fall based on investor perception rather than economic factors. Other investments may be made in anticipation of future products, services or events whose delay or cancellation could cause the stock price to drop.
- *Growth and value stock risk.* By investing in a mix of growth and value companies, the fund assumes the risks of both. Investors often expect growth companies to increase their earnings at a certain rate. If these expectations are not met, investors can punish the stocks inordinately, even if earnings do increase. In addition, growth stocks may lack the dividend yield that may cushion stock prices in market downturns. Value stocks involve the risk that they may never reach their expected full market value, either because the market fails to recognize the stock's intrinsic worth or the expected value was misgauged. They also may decline in price even though in theory they are already undervalued.
- *REIT risk.* Investments in REITs expose the fund to risks similar to investing directly in real estate. REITs are characterized as equity REITs, mortgage REITs and hybrid REITs, which combine the characteristics of both equity and mortgage REITs. Equity REITs, which may include operating or finance companies, own real estate directly and the value of, and income earned by, the REITs depends upon the income of the underlying properties and the rental income they earn. Equity REITs also can realize capital gains (or losses) by selling properties that have appreciated (or depreciated) in value. Mortgage REITs can make construction, development or long-term mortgage loans and are sensitive to the credit quality of the borrower. Mortgage REITs derive their income from interest payments on such loans. Hybrid REITs generally hold both ownership interests and mortgage interests in real estate. The value of securities issued by REITs is affected by tax and regulatory requirements and by perceptions of management skill. They also may be affected by general economic conditions and are subject to heavy cash flow dependency, defaults by borrowers or tenants, self-liquidation at an economically disadvantageous time, and the possibility of failing to qualify for favorable tax treatment under applicable U.S. or foreign law and/or to maintain exempt status under the Investment Company Act of 1940, as amended.
- *Convertible securities risk.* Convertible securities may be converted at either a stated price or stated rate into underlying shares of common stock. Convertible securities generally are subordinated to other similar but non-convertible securities of the same issuer. Although to a lesser extent than with fixed-income securities, the market value of convertible securities tends to decline as interest rates increase. In addition, because of the conversion feature, the market value of convertible securities tends to vary with fluctuations in the market value of the underlying common stock. Although convertible securities provide for a stable stream of income, they are subject to the risk that their issuers may default on their obligations. Convertible securities also offer the potential for capital appreciation through the conversion feature, although there can be no assurance of capital appreciation because securities prices fluctuate. Convertible securities generally offer lower interest or dividend yields than non-convertible securities of similar quality because of the potential for capital appreciation. Synthetic convertible securities are subject to additional risks, including risks associated with derivatives.
- *Preferred stock risk.* Preferred stock is a class of a capital stock that typically pays dividends at a specified rate. Preferred stock is generally senior to common stock, but subordinate to debt securities, with respect to the payment of dividends and on liquidation of the issuer. The market value of preferred stock generally decreases when interest rates rise and is also affected by the issuer's ability to make payments on the preferred stock.

- *Warrants risk.* Warrants are subject to the same market risk as stocks, but may be more volatile in price. An investment in warrants would not entitle the fund to receive dividends or exercise voting rights and will become worthless if the warrants cannot be profitably exercised before the expiration dates.
- *Depository receipts risk.* Depository receipts may be subject to certain of the risks associated with direct investments in the securities of foreign companies, such as currency risk, political and economic risk and market risk, because their values depend on the performance of the non-dollar denominated underlying foreign securities. Certain countries may limit the ability to convert depository receipts into the underlying foreign securities and vice versa, which may cause the securities of the foreign company to trade at a discount or premium to the market price of the related depository receipt. The fund may invest in depository receipts through an unsponsored facility where the depository issues the depository receipts without an agreement with the company that issues the underlying securities. Holders of unsponsored depository receipts generally bear all the costs of such facilities, and the depository of an unsponsored facility frequently is under no obligation to distribute shareholder communications received from the issuer of the deposited security or to pass through voting rights to the holders of the depository receipts with respect to the deposited securities. As a result, available information concerning the issuer may not be as current as for sponsored depository receipts, and the prices of unsponsored depository receipts may be more volatile than if such instruments were sponsored by the issuer.
- *Floating rate loan risk.* Unlike publicly traded common stocks which trade on national exchanges, there is no central market or exchange for loans to trade. Loans trade in an over-the-counter market, and confirmation and settlement, which are effected through standardized procedures and documentation, may take significantly longer than seven days to complete. The secondary market for floating rate loans also may be subject to irregular trading activity and wide bid/ask spreads. The lack of an active trading market for certain floating rate loans may impair the ability of the fund to realize full value in the event of the need to sell a floating rate loan and may make it difficult to value such loans. There may be less readily available, reliable information about certain floating rate loans than is the case for many other types of securities, and the fund's portfolio managers may be required to rely primarily on their own evaluation of a borrower's credit quality rather than on any available independent sources. The value of collateral, if any, securing a floating rate loan can decline, and may be insufficient to meet the issuer's obligations in the event of non-payment of scheduled interest or principal or may be difficult to readily liquidate. In the event of the bankruptcy of a borrower, the fund could experience delays or limitations imposed by bankruptcy or other insolvency laws with respect to its ability to realize the benefits of the collateral securing a loan. These laws may be less developed and more cumbersome with respect to the fund's non-U.S. investments. Uncollateralized senior loans involve a greater risk of loss. Some floating rate loans are subject to the risk that a court, pursuant to fraudulent conveyance or other similar laws, could subordinate the loans to presently existing or future indebtedness of the borrower or take other action detrimental to lenders, including the fund, such as invalidation of loans. The floating rate loans in which the fund invests typically will be below investment grade quality and, like other below investment grade securities, are inherently speculative. As a result, the risks associated with such floating rate loans are similar to the risks of below investment grade securities, although senior loans are typically senior and secured in contrast to other below investment grade securities, which are often subordinated and unsecured. Floating rate loans may not be considered to be "securities" for purposes of the anti-fraud protections of the federal securities laws, including those with respect to the use of material non-public information, so that purchasers, such as the fund, may not have the benefit of these protections. Because of the financial services and asset management activities of the sub-adviser and its affiliates, the sub-adviser may not have access to material non-public information regarding the borrower to which other lenders have access which could put the fund at a disadvantage compared to such other investors.
- *Participation interests and assignments risk.* A participation interest gives the fund an undivided interest in a loan in the proportion that the fund's participation interest bears to the total principal amount of the loan, but does not establish any direct relationship between the fund and the borrower. If a floating rate loan is acquired through a participation, the fund generally will have no right to enforce compliance by the borrower with the terms of the loan agreement against the borrower, and the fund may not directly benefit from the collateral supporting the debt obligation in which it has purchased the participation. As a result, the fund will be exposed to the credit risk of both the borrower and the institution selling the participation. The fund also may invest in a loan through an assignment of all or a portion of such loan from a third party. If a floating rate loan is acquired through an assignment, the fund may not be able to unilaterally enforce all rights and remedies under the loan and with regard to any associated collateral.
- *LPNs risk.* LPNs are subject to the same risks as other debt obligations, which may include credit risk, interest rate risk, liquidity risk and market risk. In addition, LPNs have limited recourse to the issuer, to the extent of the amount received by the issuer from the ultimate borrower in paying the principal and interest amounts as defined under the loan agreement. The fund may be exposed to the credit risk of both the lender and the borrower, and may not benefit from any collateral supporting the underlying loan. In the event of a default by the underlying borrower of an LPN, the fund may experience delays in receiving payments of interest and principal while the note issuer enforces and

liquidates the underlying collateral, and there is no guarantee that the underlying collateral will cover the principal and interest owed to the fund under the LPN.

- *ETN risk.* ETNs are debt securities that combine certain aspects of ETFs and bonds. ETNs are not investment companies and thus are not regulated under the Investment Company Act of 1940, as amended. ETNs, like ETFs, are traded on stock exchanges and generally track specified market indices, and their value depends on the performance of the underlying index and the credit rating of the issuer. ETNs may be held to maturity, but unlike bonds there are no periodic interest payments. In addition, principal is not protected.
- *ELN risk.* ELNs are generally subject to the same risks as the foreign equity securities or the basket of foreign securities to which they are linked. If the linked securities decline in value, the ELN may return a lower amount at maturity. ELNs involve further risks associated with purchases and sales of notes, including the exchange rate fluctuations and a decline in the credit quality of the note's issuer. ELNs are frequently secured by collateral. If an issuer defaults, the fund would look to any underlying collateral to recover its losses. Ratings of issuers of ELNs refer only to the issuers' creditworthiness and the related collateral. They provide no indication of the potential risks of the linked securities.
- *CDOs risk.* The risks of an investment in a CDO, including a CBO or CLO, depend largely on the type of the collateral and the tranche of the CDO in which the fund invests. CDO tranches can experience substantial losses due to actual defaults, increased sensitivity to defaults due to collateral default, market anticipation of defaults, as well as aversion to CDO securities as an asset class. Normally, CBOs, CLOs and other CDOs are privately offered and sold, and thus, are not registered under the securities laws and may not have an active secondary trading market. As a result, investments in CDOs may be characterized by the fund as illiquid securities. In addition to the normal risks associated with credit-related securities discussed elsewhere in this prospectus (e.g., interest rate risk and default risk), investments in CDOs may be more volatile, less liquid and more difficult to price than other types of investments.
- *Prepayment risk.* Some securities give the issuer the option to prepay or call the securities before their maturity date, which may reduce the market value of the security and the anticipated yield-to-maturity. Issuers often exercise this right when interest rates fall. In addition, floating rate loans may not have call protection and may be prepaid partially or in full at any time without penalty. If an issuer "calls" its securities during a time of declining interest rates, the fund might have to reinvest the proceeds in an investment offering a lower yield, and therefore might not benefit from any increase in value as a result of declining interest rates. During periods of market illiquidity or rising interest rates, prices of "callable" issues are subject to increased price fluctuation.
- *Mortgage-related securities risk.* Mortgage-related securities are complex derivative instruments, subject to credit, prepayment and extension risk, and may be more volatile, less liquid and more difficult to price accurately than more traditional debt securities. The fund is subject to the credit risk associated with these securities, including the market's perception of the creditworthiness of the issuing federal agency, as well as the credit quality of the underlying assets. Although certain mortgage-related securities are guaranteed as to the timely payment of interest and principal by a third party (such as a U.S. government agency or instrumentality with respect to government-related mortgage-backed securities) the market prices for such securities are not guaranteed and will fluctuate. Privately issued mortgage-related securities also are subject to credit risks associated with the performance of the underlying mortgage properties, and may be more volatile and less liquid than more traditional government-backed debt securities. As with other interest-bearing securities, the prices of certain mortgage-related securities are inversely affected by changes in interest rates. However, although the value of a mortgage-related security may decline when interest rates rise, the converse is not necessarily true, since in periods of declining interest rates the mortgages underlying the security are more likely to be prepaid causing the fund to purchase new securities at current market rates, which usually will be lower. The loss of higher yielding underlying mortgages and the reinvestment of proceeds at lower interest rates, known as prepayment risk, can reduce the fund's potential price gain in response to falling interest rates, reduce the fund's yield and/or cause the fund's share price to fall. Moreover, with respect to certain stripped mortgage-backed securities, if the underlying mortgage securities experience greater than anticipated prepayments of principal, the fund may fail to fully recoup its initial investment even if the securities are rated in the highest rating category by a nationally recognized statistical rating organization. When interest rates rise, the effective duration of the fund's mortgage-related and other asset-backed securities may lengthen due to a drop in prepayments of the underlying mortgages or other assets. This is known as extension risk and would increase the fund's sensitivity to rising interest rates and its potential for price declines.
- *Asset-backed securities risk.* General downturns in the economy could cause the value of asset-backed securities to fall. In addition, asset-backed securities present certain risks that are not presented by mortgage-backed securities. Primarily, these securities may provide the fund with a less effective security interest in the related collateral than do mortgage-backed securities. Therefore, there is the possibility that recoveries on the underlying collateral may not, in some cases, be available to support payments on these securities.

- *Government securities risk.* Not all obligations of the U.S. government, its agencies and instrumentalities are backed by the full faith and credit of the U.S. Treasury. Some obligations are backed only by the credit of the issuing agency or instrumentality, and in some cases there may be some risk of default by the issuer. Any guarantee by the U.S. government or its agencies or instrumentalities of a security held by the fund does not apply to the market value of such security or to shares of the fund itself. A security backed by the U.S. Treasury or the full faith and credit of the United States is guaranteed only as to the timely payment of interest and principal when held to maturity. In addition, because many types of U.S. government securities trade actively outside the United States, their prices may rise and fall as changes in global economic conditions affect the demand for these securities.
- *Inflation-indexed security risk.* Interest payments on inflation-indexed securities can be unpredictable and will vary as the principal and/or interest is periodically adjusted based on the rate of inflation. If the index measuring inflation falls, the interest payable on these securities will be reduced. The U.S. Treasury has guaranteed that in the event of a drop in prices, it would repay the par amount of its inflation-indexed securities. Inflation-indexed securities issued by corporations generally do not guarantee repayment of principal. Any increase in the principal amount of an inflation-indexed security will be considered taxable ordinary income, even though investors do not receive their principal until maturity. As a result, the fund may be required to make annual distributions to shareholders that exceed the cash the fund received, which may cause the fund to liquidate certain investments when it is not advantageous to do so. Also, if the principal value of an inflation-indexed security is adjusted downward due to deflation, amounts previously distributed may be characterized in some circumstances as a return of capital.
- *Structured notes risk.* Structured notes, a type of derivative instrument, can be volatile, and the possibility of default by the financial institution or counterparty may be greater for these instruments than for other types of derivative instruments. Structured notes typically are purchased in privately negotiated transactions from financial institutions and, thus, an active trading market for such instruments may not exist.
- *Tax risk.* As a regulated investment company (RIC), the fund must derive at least 90% of its gross income for each taxable year from sources treated as "qualifying income" under the Internal Revenue Code of 1986, as amended. The fund may gain exposure to currency markets through entering into forward currency contracts. Although foreign currency gains currently constitute qualifying income, the U.S. Treasury Department has the authority to issue regulations excluding from the definition of "qualifying income" a RIC's foreign currency gains not "directly related" to its "principal business" of investing in stock or securities (or options and futures with respect thereto). Such regulations might treat gains from some of the fund's foreign currency-denominated positions as not qualifying income. The fund may gain exposure to commodity markets through investments in commodity-linked structured notes. The tax treatment of commodity-linked notes may be adversely affected by future legislation, Treasury regulations or guidance issued by the Internal Revenue Service that could affect the character, timing or amount of the fund's taxable income or any gains and distributions made by the fund.
- *IPO risk.* The prices of securities purchased in IPOs can be very volatile. The effect of IPOs on the fund's performance depends on a variety of factors, including the number of IPOs the fund invests in relative to the size of the fund and whether and to what extent a security purchased in an IPO appreciates or depreciates in value. As a fund's asset base increases, IPOs often have a diminished effect on such fund's performance.
- *Forward commitments risk.* The purchase or sale of securities on a forward commitment basis means delivery and payment take place at a future date at a predetermined price. When purchasing a security on a forward commitment basis, the fund would assume the risks of ownership of the security, including the risk of price fluctuations, and takes such fluctuations into account when determining its net asset value.

Under adverse market conditions, the fund could invest some or all of its assets in U.S. Treasury securities and money market securities, or hold cash. Although the fund would do this for temporary defensive purposes, it could reduce the benefit from any upswing in the market. During such periods, the fund's investments may not be consistent with its principal investment strategies, and the fund may not achieve its investment objective.

Management

The investment adviser for the fund is The Dreyfus Corporation, 200 Park Avenue, New York, New York 10166. Founded in 1947, Dreyfus manages approximately \$261 billion in 151 mutual fund portfolios. The fund has agreed to pay Dreyfus a management fee at the annual rate of 0.75% of the fund's average daily net assets. A discussion regarding the basis for the board's approving the fund's management agreement with Dreyfus will be available in the fund's semi-annual report for the period ending April 30, 2018. Dreyfus is the primary mutual fund business of The Bank of New York Mellon Corporation (BNY Mellon), a global financial services company focused on helping clients manage and service their financial assets, operating in 35 countries and serving more than 100 markets. BNY Mellon is a leading investment management and investment services company, uniquely focused to help clients manage and move their financial assets in the rapidly changing global marketplace. BNY Mellon has \$32.2 trillion in assets under custody and

administration and \$1.8 trillion in assets under management. BNY Mellon is the corporate brand of The Bank of New York Mellon Corporation. BNY Mellon Investment Management is one of the world's leading investment management organizations, and one of the top U.S. wealth managers, encompassing BNY Mellon's affiliated investment management firms, wealth management services and global distribution companies. Additional information is available at www.bnymellon.com.

The Dreyfus asset management philosophy is based on the belief that discipline and consistency are important to investment success. For each fund, Dreyfus seeks to establish clear guidelines for portfolio management and to be systematic in making decisions. This approach is designed to provide each fund with a distinct, stable identity.

Dreyfus has engaged its affiliate, Pareto Investment Management Limited, a wholly-owned subsidiary of Insight Investment Management Limited (Insight Investment Management Limited, together with its subsidiaries and affiliated U.S. companies that comprise the Insight group of companies, are referred to herein as Insight), to serve as the fund's sub-adviser. The fund's sub-adviser, with its registered office located at The Bank of New York Mellon Centre, 160 Queen Victoria Street, London, EC4V 4LA, United Kingdom, is a United Kingdom limited company regulated by the Financial Conduct Authority in the United Kingdom and registered in the United States with the SEC as an investment adviser and the National Futures Association as a Commodities Trading Adviser and Commodity Pool Operator. Insight Investment Management Limited is a United Kingdom company and wholly-owned subsidiary of BNY Mellon. The fund's sub-adviser, subject to Dreyfus' supervision and approval, provides day-to-day management of the fund's assets. As of August 31, 2017, Insight managed approximately \$725.5 billion of assets. Assets under management are represented by the value of cash securities and other economic exposure managed for clients. A discussion regarding the basis for the board's approving the sub-investment advisory agreement between Dreyfus and the fund's sub-adviser will be available in the fund's semi-annual report for the period ending April 30, 2018.

Matthew Merritt, Steve Waddington and Michael Ford are the fund's primary portfolio managers, positions they have held since the fund's inception in November 2017. Mr. Merritt is a portfolio manager and head of the multi-asset strategy team at Insight, which he joined in 2004. Mr. Waddington is a portfolio manager on the multi-asset strategy team at Insight, which he joined in 2008. Mr. Ford is a portfolio manager on the multi-asset strategy team at Insight, which he joined in 2003.

The fund's Statement of Additional Information (SAI) provides additional portfolio manager information, including compensation, other accounts managed and ownership of fund shares.

Dreyfus has obtained from the SEC an exemptive order (the existing order), upon which the fund may rely, to use a manager of managers approach that permits Dreyfus, subject to certain conditions and approval by the fund's board, to enter into and materially amend sub-investment advisory agreements with one or more sub-advisers who are either unaffiliated with Dreyfus or are wholly-owned subsidiaries (as defined in the Investment Company Act of 1940, as amended) of Dreyfus' ultimate parent company, BNY Mellon, without obtaining shareholder approval. Dreyfus has applied for an exemptive order from the SEC, which would replace the existing order, and upon which the fund may rely if granted by the SEC, that would permit Dreyfus, subject to certain conditions and approval by the fund's board, to hire and replace one or more sub-advisers that are either unaffiliated or affiliated with Dreyfus (whether or not wholly-owned subsidiaries of BNY Mellon), without obtaining shareholder approval. The requested order, like the existing order, also relieves the fund from disclosing the sub-investment advisory fee paid by Dreyfus to an unaffiliated sub-adviser in documents filed with the SEC and provided to shareholders. In addition, pursuant to the existing order, it is not necessary to disclose the sub-investment advisory fee payable by Dreyfus separately to a sub-adviser that is a wholly-owned subsidiary of BNY Mellon in documents filed with the SEC and provided to shareholders; such fees are to be aggregated with fees payable to Dreyfus. The requested order would require the same disclosure with respect to the sub-investment advisory fee payable by Dreyfus separately to a sub-adviser that is an affiliate of Dreyfus (whether or not a wholly-owned subsidiary of BNY Mellon). Dreyfus has ultimate responsibility (subject to oversight by the fund's board) to supervise any sub-adviser and recommend the hiring, termination, and replacement of any sub-adviser to the fund's board. Currently, the fund has selected Pareto Investment Management Limited, an indirect wholly-owned subsidiary of BNY Mellon that is covered under the existing order, to manage all of the fund's assets. One of the conditions of the requested order, like the existing order, is that the fund's board, including a majority of the "non-interested" board members, must approve each new sub-adviser. In addition, the fund would be required under the requested order, as it is required under the existing order, to provide shareholders with information about each new sub-adviser within 90 days of the hiring of any new sub-adviser. There is no guarantee that the requested order will be granted by the SEC.

Certain bank regulatory restrictions applicable to BNY Mellon (the parent company of Dreyfus) and internal BNY Mellon policies intended to ensure compliance with such regulations may, from time to time, preclude the fund from purchasing (and, in very limited instances, require the fund to reduce its position in) particular securities or financial instruments, even if such securities or financial instruments would meet the investment objectives of the fund.

MBSC Securities Corporation (MBSC), a wholly-owned subsidiary of Dreyfus, serves as distributor of the fund and of the other funds in the Dreyfus Family of Funds. Any Rule 12b-1 fees and shareholder services fees, as applicable, are paid to MBSC for financing the sale and distribution of fund shares and for providing shareholder account service and maintenance, respectively. Dreyfus or MBSC may provide cash payments out of its own resources to financial intermediaries that sell shares of funds in the Dreyfus Family of Funds (except Class Y shares) or provide other services. Such payments are separate from any sales charges, 12b-1 fees and/or shareholder services fees or other expenses that may be paid by a fund to those financial intermediaries. Because those payments are not made by fund shareholders or the fund, the fund's total expense ratio will not be affected by any such payments. These payments may be made to financial intermediaries, including affiliates, that provide shareholder servicing, sub-administration, recordkeeping and/or sub-transfer agency services, marketing support and/or access to sales meetings, sales representatives and management representatives of the financial intermediary. Cash compensation also may be paid from Dreyfus' or MBSC's own resources to financial intermediaries for inclusion of a fund on a sales list, including a preferred or select sales list or in other sales programs. These payments sometimes are referred to as "revenue sharing." From time to time, Dreyfus or MBSC also may provide cash or non-cash compensation to financial intermediaries or their representatives in the form of occasional gifts; occasional meals, tickets or other entertainment; support for due diligence trips; educational conference sponsorships; support for recognition programs; technology or infrastructure support; and other forms of cash or non-cash compensation permissible under broker-dealer regulations. In some cases, these payments or compensation may create an incentive for a financial intermediary or its employees to recommend or sell shares of the fund to you. This potential conflict of interest may be addressed by policies, procedures or practices that are adopted by the financial intermediary. As there may be many different policies, procedures or practices adopted by different intermediaries to address the manner in which compensation is earned through the sale of investments or the provision of related services, the compensation rates and other payment arrangements that may apply to a financial intermediary and its representatives may vary by intermediary. Please contact your financial representative for details about any payments they or their firm may receive in connection with the sale of fund shares or the provision of services to the fund.

The fund, Dreyfus, the fund's sub-adviser and MBSC have each adopted a code of ethics that permits its personnel, subject to such code, to invest in securities, including securities that may be purchased or held by the fund. Each code of ethics restricts the personal securities transactions of employees, and requires portfolio managers and other investment personnel to comply with the code's preclearance and disclosure procedures. The primary purpose of the respective codes is to ensure that personal trading by employees does not disadvantage any fund managed by Dreyfus or its affiliates.

Performance Information for Related Accounts

Insight manages certain discretionary investment management accounts, including UCITS funds established in Europe, using substantially similar investment objectives, policies and strategies as the fund (collectively, the "Related Accounts"). The tables below show the returns for a composite of all Related Accounts (the "Related Account Composite") and for the Citi 1-Month Treasury Bill Index and USD 1-Month LIBOR. The Index information is provided to represent the investment environment existing at the time periods shown. The Citi 1-Month Treasury Bill Index and USD 1-Month LIBOR are unmanaged and an investor may not invest directly in such Index or LIBOR. Similar to the manner in which the fund is managed, the portfolio managers have considerable latitude in allocating the Related Accounts' investments across multiple investment strategies and asset classes and may vary the amount of the Related Accounts' assets allocated to a strategy or asset class depending on market conditions, including maintaining zero exposure to an investment strategy or asset class. Investors should not consider this performance data as an indication of the future performance of the fund or the Related Account Composite.

The performance figures for the Related Account Composite reflect the deduction of all management fees and performance fees charged to investors in the Related Accounts, and all other expenses (excluding taxes) of the Related Accounts during the periods shown, and not the management fee and other expenses payable by the fund. The fees charged to investors in the Related Accounts are available upon request from Insight. None of the Related Accounts are registered as an investment company under the Investment Company Act of 1940, as amended. The performance of the Related Account Composite could have been adversely affected by the imposition of certain regulatory requirements, restrictions and limitations if such accounts had been regulated as investment companies under the U.S. federal securities and tax laws. Additionally, although it is anticipated that the fund and Related Accounts included in the Related Account Composite may hold similar securities, their investment results are expected to differ. In particular, differences in asset size and in cash flow resulting from purchases and redemptions of fund shares may result in different security selections, differences in the relative weightings of securities or differences in the price paid for particular fund holdings. Moreover, certain absolute return investment funds that the Related Accounts invested in from time to time during periods for which performance is shown in the tables below will not be available for investment by the fund. In addition, certain of the fund's share classes are subject to a sales load and the fund's total operating expenses are expected to be higher than those of the Related Accounts; if the applicable fund sales loads and the fund's expenses were

reflected, the performance shown would be lower. Please remember that past performance is not indicative of future returns, and that the investment return and principal value of an investment will fluctuate, sometimes dramatically, so that an investor's shares, when redeemed, may be worth more or less than their original cost.

Historical performance information for the Related Account Composite and the Citi 1-Month Treasury Bill Index and USD 1-Month LIBOR is shown below. All Related Account Composite total returns and total assets are calculated in U.S. dollars and reflect the reinvestment of dividends and other distributions. Performance figures for the Related Account Composite reflect the deduction of all management fees and performance fees charged to investors in the Related Accounts, and all other expenses (excluding taxes) of the Related Accounts during the periods shown. Insight claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented the Related Account Composite in compliance with the GIPS standards. This calculation method differs from guidelines of the SEC for calculating performance of mutual funds. Insight has not been independently verified. Additional information regarding Insight's policies and procedures for calculating and reporting performance returns, and a listing and description of all of its composites, are available upon request for financial advisers by calling 1-800-334-6899 and for individual shareholders by calling 1-800-DREYFUS (inside the U.S. only).

Shareholder Guide

Choosing a Share Class

The fund is designed primarily for people who are investing through third party intermediaries that have entered into selling agreements with the fund's distributor, such as banks, brokers, dealers or financial advisers (collectively, financial intermediaries), or in Retirement Plans. Financial intermediaries with whom you open a fund account may have different policies and procedures than those described in this prospectus or the SAI. Accordingly, the availability of certain share classes and/or shareholder privileges or services described in this prospectus or the SAI will depend on the policies, procedures and trading platforms of the financial intermediary or Retirement Plan recordkeeper. To be eligible for the share classes and/or shareholder privileges or services described in this prospectus or the SAI, you may need to open a fund account directly with the fund's distributor or a financial intermediary that offers such classes and/or privileges or services. The fund also may offer one or more other classes of shares, described in separate prospectuses. Financial intermediaries purchasing fund shares on behalf of their clients determine the class of shares available for their clients. Consult a representative of your financial intermediary or Retirement Plan for further information.

This prospectus offers Class A, C, I and Y shares of the fund.

Your financial intermediary may receive different compensation for selling one class of shares than for selling another class, and may impose its own account fees and methods for purchasing and selling fund shares, which may depend on, among other things, the type of investor account and the policies, procedures and practices adopted by your financial intermediary. You should review these arrangements with your financial representative before determining which class to invest in.

The different classes of fund shares represent investments in the same portfolio of securities, but the classes are subject to different expenses and will likely have different share prices. When choosing a class, you should consider your investment amount, anticipated holding period, the potential costs over your holding period and whether you qualify for any reduction or waiver of the sales charge. It is important to remember that any contingent deferred sales charge (CDSC) or Rule 12b-1 fees have the same purpose as the front-end sales charge: to compensate the distributor for concessions and expenses it pays to dealers and financial intermediaries in connection with the sale of fund shares. A CDSC is not charged on fund shares acquired through the reinvestment of fund dividends. Because the Rule 12b-1 fee is paid out of the fund's assets on an ongoing basis, over time it will increase the cost of your investment and may cost you more than paying other types of sales charges. Information regarding sales charges is not made available separately at www.dreyfus.com because such information is fully contained in this prospectus and in the SAI in the How to Buy Shares section and the Additional Information About How to Buy Shares section beginning on page II-1 and page III-1, respectively.

A complete description of these classes follows.

Class A Shares

When you invest in Class A shares, you pay the public offering price, which is the share price, or net asset value (NAV), plus the initial sales charge that may apply to your purchase. The amount of the initial sales charge is based on the size of your investment, as the following table shows. We also describe below how you may reduce or eliminate the initial sales charge (see "Sales Charge Reductions and Waivers"). Class A shares are subject to an annual shareholder services fee of .25% paid to the fund's distributor for shareholder account service and maintenance.

Since some of your investment goes to pay an up-front sales charge when you purchase Class A shares, you purchase fewer shares than you would with the same investment in Class C shares. Nevertheless, you are usually better off purchasing Class A shares, rather than Class C shares, and paying an up-front sales charge if you:

- plan to own the shares for an extended period of time, since the ongoing Rule 12b-1 fees on Class C shares may eventually exceed the cost of the up-front sales charge; and
- qualify for a reduced or waived sales charge

If you invest \$1 million or more (and are not eligible to purchase Class I or Y shares), Class A shares will always be the most advantageous choice.

Amount of Transaction	Total Sales Load -- Class A Shares	
	As a % of Offering Price per Share	As a % of Net Asset Value per Share
Less than \$50,000	5.75	6.10
\$50,000 to less than \$100,000	4.50	4.71
\$100,000 to less than \$250,000	3.50	3.63
\$250,000 to less than \$500,000	2.50	2.56
\$500,000 to less than \$1,000,000	2.00	2.04
\$1,000,000 or more*	-0-	-0-

* No sales charge applies on investments of \$1 million or more, but a CDSC of 1% may be imposed on certain redemptions of such shares within one year of the date of purchase.

Sales Charge Reductions and Waivers

To receive a reduction or waiver of your initial sales charge or CDSC, you must let your financial intermediary or the fund's distributor, as applicable, know at the time you purchase fund shares that you qualify for such a reduction or waiver. If you do not let your financial intermediary or the fund's distributor, as applicable, know that you are eligible for a reduction or waiver, you may not receive the reduction or waiver to which you are otherwise entitled. In order to receive a reduction or waiver, you may be required to provide your financial intermediary or the fund's distributor, as applicable, with evidence of your qualification for the reduction or waiver. You should consult a representative of your financial intermediary. Certain sales charge reductions and waivers are available only if you purchase your shares directly from the fund's distributor for fund accounts maintained with the distributor; these sales charge reductions and waivers are described below. In addition, shareholders purchasing Class A shares of the fund through an omnibus account maintained with Merrill Lynch will be eligible only for sales charge reductions and waivers made available by Merrill Lynch; these sales charge reductions and waivers are also described below.

You can reduce your initial sales charge in the following ways:

- *Rights of accumulation.* You can count toward the amount of your investment your total account value in all shares of the fund and other Dreyfus Funds that are subject to a sales charge. For example, if you have \$1 million invested in shares that are subject to a sales charge of other Dreyfus Funds, you can invest in Class A shares of the fund without an initial sales charge. For purposes of determining "your total account value", shares held will be valued at their current market value. We may terminate or change this privilege at any time on written notice.
- *Letter of intent.* You can sign a letter of intent, in which you agree to invest a certain amount (your goal) over a 13-month period in shares of the fund and other Dreyfus Funds that are subject to a sales charge, and your initial sales charge will be based on your goal. A 90-day back-dated period can also be used to count previous purchases toward your goal. Your goal must be at least \$50,000, and your initial investment must be at least \$5,000. Each purchase will be made at the public offering price applicable to a single transaction of the dollar amount specified in the letter of intent. The sales charge will be adjusted if you do not meet your goal. By signing a letter of intent, you authorize the fund's transfer agent to hold in escrow 5% of the amount indicated in the letter of intent and redeem Class A shares in your account to pay the additional sales charge if the letter of intent goal is not met prior to the expiration of the 13-month period. See "Additional Information About Shareholder Services" in the SAI.
- *Combine with family members and other related purchasers.* You can also count toward the amount of your investment all investments in shares that are subject to a sales charge of other Dreyfus Funds, by your spouse and your minor children (family members), including their rights of accumulation and goals under a letter of intent. In addition, (i) a trustee or other fiduciary purchasing securities for a single trust estate or a single fiduciary account although more than one beneficiary is involved and (ii) a group of accounts established by or on behalf of the employees of an employer or affiliated employers pursuant to a Retirement Plan will each be permitted to combine their investments for purposes of reducing or eliminating sales charges. See "How to Buy Shares" in the SAI.

Class A shares may be purchased at NAV without payment of a sales charge by the following individuals and entities:

- full-time or part-time employees, and their spouses or domestic partners and minor children, of Dreyfus or any of its affiliates
- board members of Dreyfus and board members of the Dreyfus Family of Funds, and their spouses or domestic partners and minor children
- full-time employees, and their spouses and minor children, of financial intermediaries
- "wrap" accounts for the benefit of clients of financial intermediaries

- qualified separate accounts maintained by an insurance company; any state, county or city or instrumentality thereof; and charitable organizations investing \$50,000 or more in fund shares and charitable remainder trusts, provided that such Class A shares are purchased directly through the fund's distributor for fund accounts maintained with the distributor
- investors who purchase Class A shares directly through the fund's distributor for fund accounts maintained with the distributor, and either (i) have, or whose spouse or minor children have, beneficially owned shares and continuously maintained an open account with the distributor in a Dreyfus-managed fund since on or before February 28, 2006, or (ii) such purchase is for a self-directed investment account that may or may not be subject to a transaction fee
- investors who participate in a self-directed investment brokerage account program offered by a financial intermediary that may or may not charge their customers a transaction fee
- Retirement Plans, provided that such Class A shares are purchased through a financial intermediary that performs recordkeeping or other administrative services for the Retirement Plan or are purchased directly through the fund's distributor for fund accounts maintained with the distributor
- shareholders in Dreyfus-sponsored IRA rollover accounts funded with the distribution proceeds from Retirement Plans. Upon establishing the Dreyfus-sponsored IRA rollover account in the fund, the shareholder becomes eligible to make subsequent purchases of Class A shares of the fund at NAV in such account

Front-end sales charge reductions on Class A shares purchased through Merrill Lynch

Shareholders purchasing Class A shares of the fund through an omnibus account maintained with Merrill Lynch will be eligible only for the following sales charge reductions, which may differ from those disclosed elsewhere in this prospectus or the SAI. Such shareholders can reduce their initial sales charge in the following ways:

- *Transaction size breakpoints*, as described above in this prospectus.
- *Rights of accumulation (ROA)*, which entitle shareholders to breakpoint discounts as described above in this prospectus, will be automatically calculated based on the aggregated holdings of shares of funds in the Dreyfus Family of Funds held in accounts of the purchaser and the purchaser's household members at Merrill Lynch. Shares of funds in the Dreyfus Family of Funds not held in accounts of the purchaser's household members at Merrill Lynch may be included in the ROA calculation only if the shareholder notifies his or her financial advisor about such assets.
- *Letter of intent*, which allows for breakpoint discounts as described above in this prospectus, based on anticipated purchases of shares of funds in the Dreyfus Family of Funds purchased through Merrill Lynch over a 13-month period.

Front-end sales charge waivers on Class A shares purchased through Merrill Lynch

Shareholders purchasing Class A shares of the fund through an omnibus account maintained with Merrill Lynch will be eligible only for the following sales charge waivers, which may differ from those disclosed elsewhere in this prospectus or the SAI. Such shareholders may purchase Class A shares at NAV without payment of a sales charge as follows:

- shares purchased by employer-sponsored retirement, deferred compensation and employee benefit plans (including health savings accounts) and trusts used to fund those plans, provided that the shares are not held in a commission-based brokerage account and the shares are held for the benefit of the plan
- shares purchased by or through a 529 plan
- shares purchased through a Merrill Lynch-affiliated investment advisory program
- shares purchased by third party investment advisors on behalf of their advisory clients through Merrill Lynch's platform
- shares purchased through the Merrill Edge Self-Directed platform
- shares of the fund purchased through reinvestment of dividends and capital gains distributions of the fund (but not any other fund in the Dreyfus Family of Funds)
- shares of the fund received through an exchange of Class C shares of the fund in the month of or month following the 10-year anniversary date of the purchase of the Class C shares
- shares purchased by employees and registered representatives of Merrill Lynch or its affiliates and their family members
- shares purchased by board members of the fund and employees of Dreyfus or any of its affiliates, as described in this prospectus

- shares purchased from the proceeds of a redemption of shares of a fund in the Dreyfus Family of Funds, provided (1) the repurchase occurs within 90 days following the redemption, (2) the redemption and purchase occur in the same account, and (3) redeemed shares were subject to a front-end sales charge or CDSC (Right of Reinstatement)

Class C Shares

Since you pay no initial sales charge, an investment of less than \$1 million in Class C shares buys more shares than the same investment would in Class A shares. However, Class C shares are subject to an annual Rule 12b-1 fee of .75% paid to the fund's distributor in connection with the sale of Class C shares and an annual shareholder services fee of .25% paid to the fund's distributor for shareholder account service and maintenance. Because the Rule 12b-1 fees are paid out of the fund's assets attributable to Class C shares on an ongoing basis, over time these fees will increase the cost of your investment and may cost you more than paying other types of sales charges, such as the initial sales charge on Class A shares. Class C shares redeemed within one year of purchase are subject to a 1% CDSC.

Because Class A shares will always be a more favorable investment than Class C shares for investments of \$1 million or more, the fund will generally not accept a purchase order for Class C shares in the amount of \$1 million or more. While the fund will take reasonable steps to prevent investments of \$1 million or more in Class C shares, it may not be able to identify such investments made through certain financial intermediaries or omnibus accounts.

Class I Shares

Since you pay no initial sales charge, an investment of less than \$1 million in Class I shares buys more shares than the same investment would in a class of shares subject to an initial sales charge. There is also no CDSC imposed on redemptions of Class I shares, and you do not pay any ongoing service or distribution fees.

Class I shares may be purchased by:

- bank trust departments, trust companies and insurance companies that have entered into agreements with the fund's distributor to offer Class I shares to their clients
- institutional investors acting in a fiduciary, advisory, agency, custodial or similar capacity for Retirement Plans and SEP-IRAs that have entered into agreements with the fund's distributor to offer Class I shares to such plans and are not eligible to purchase Class Y shares
- law firms or attorneys acting as trustees or executors/administrators
- foundations and endowments that make an initial investment in the fund of at least \$1 million and are not eligible to purchase Class Y shares
- sponsors of college savings plans that qualify for tax-exempt treatment under Section 529 of the Internal Revenue Code, that maintain an omnibus account with the fund and do not require shareholder tax reporting or 529 account support responsibilities from the fund's distributor
- advisory fee-based accounts offered through financial intermediaries who, depending on the structure of the selected advisory platform, make Class I shares available
- certain institutional clients of a BNY Mellon investment advisory subsidiary, provided that such clients are approved by Dreyfus and are not eligible to purchase Class Y shares
- U.S.-based employees of BNY Mellon, board members of Dreyfus and board members of funds in the Dreyfus Family of Funds, and the spouse, domestic partner or minor child of any of the foregoing, subject to certain conditions described in the SAI, and provided that such Class I shares are purchased directly through the fund's distributor
- unaffiliated investment companies approved by the fund's distributor

Institutions purchasing fund shares on behalf of their clients determine whether Class I shares will be available for their clients. Accordingly, the availability of Class I shares of the fund will depend on the policies, procedures and trading platforms of the institutional investor.

Class Y Shares

Class Y shares are not subject to an initial sales charge or any service or distribution fees. There also is no CDSC imposed on redemptions of Class Y shares. The fund, Dreyfus or the fund's distributor or their affiliates will not make any shareholder servicing, sub-transfer agency, administrative or recordkeeping payments, nor will Dreyfus or the fund's distributor or their affiliates provide any "revenue sharing" payments, with respect to Class Y shares.

Class Y shares of the fund may be purchased by:

- institutional investors, acting for themselves or on behalf of their clients, that have entered into an agreement with the fund's distributor and make an initial investment in Class Y shares of the fund of at least \$1 million
- Retirement Plans, or certain recordkeepers of Retirement Plan platforms that maintain a super-omnibus account with the fund, provided that, in each case, they have entered into an agreement with the fund's distributor and make an initial investment in Class Y shares of the fund of at least \$1 million or have, in the opinion of Dreyfus, adequate intent and availability of assets to reach a future level of investment of \$1 million or more in Class Y shares of the fund
- certain institutional clients of a BNY Mellon investment advisory subsidiary, provided that such clients are approved by Dreyfus and make an initial investment in Class Y shares of the fund of at least \$1 million
- certain funds in the Dreyfus Family of Funds and series of BNY Mellon Funds Trust

Generally, each institutional investor will be required to open and maintain a single master account with the fund for all purposes. With respect to recordkeepers of Retirement Plan platforms, the fund considers a super-omnibus account to be one single master account maintained by the Retirement Plan recordkeeper on behalf of multiple Retirement Plans. Certain holders of Class I shares of the fund who meet the eligibility requirements for the purchase of Class Y shares of the fund and who do not require the fund, Dreyfus or the fund's distributor or their affiliates to make any shareholder servicing, sub-transfer agency, administrative or recordkeeping payments may have all of their Class I shares of the fund converted into Class Y shares of the fund. Dreyfus, the fund's distributor or their affiliates will not provide any "revenue sharing" payments with respect to Class I shares converted into Class Y shares.

Institutions purchasing fund shares on behalf of their clients determine whether Class Y shares will be available for their clients. Accordingly, the availability of Class Y shares of the fund will depend on the policies, procedures and trading platforms of the institutional investor.

CDSC Waivers

The fund's CDSC on Class A and C shares may be waived in the following cases:

- exchanges of shares, except if shares acquired by exchange are then redeemed within the period during which a CDSC would apply to the initial shares purchased
- redemptions made within one year of death or disability of the shareholder
- redemptions due to receiving applicable required minimum distributions from IRA accounts (other than Roth IRAs or Coverdell Education Savings Accounts) upon reaching age 70½
- redemptions made through Dreyfus Automatic Withdrawal Plan, if such redemptions do not exceed 12% of the value of the account annually
- redemptions by Retirement Plans, provided that the shares being redeemed were purchased through a financial intermediary that performs recordkeeping or other administrative services for the Retirement Plan, or were purchased directly through the fund's distributor

CDSC waivers on Class A and C shares purchased through Merrill Lynch

Fund shares purchased through an omnibus account maintained with Merrill Lynch will be eligible only for the following CDSC waivers, which may differ from those disclosed elsewhere in this prospectus or the SAI:

- redemptions made within one year of death or disability of the shareholder
- redemptions made through Dreyfus Automatic Withdrawal Plan, if such redemptions do not exceed 12% of the value of the account annually
- redemptions made in connection with a return of excess contributions from an IRA account
- shares acquired through a Right of Reinstatement (as defined above)
- redemptions due to receiving applicable required minimum distributions from IRA accounts (other than Roth IRAs or Coverdell Education Savings Accounts) upon reaching age 70½
- redemptions made to pay Merrill Lynch fees, but only if the redemption is initiated by Merrill Lynch
- redemptions of fund shares held in a retirement brokerage account that are exchanged for shares of a lower cost share class in connection with the transfer to certain fee based accounts or platforms

Buying and Selling Shares

Dreyfus calculates fund NAVs as of the scheduled close of trading on the New York Stock Exchange (NYSE) (usually 4:00 p.m. Eastern time) on days the NYSE is scheduled to be open for regular business. Your order will be priced at the next NAV calculated after your order is received in proper form by the fund's transfer agent or other authorized entity. "Proper form" refers to completion of an account application (if applicable), satisfaction of requirements in this section (subject to "Shareholder Guide—General Policies") and any applicable conditions in "Additional Information About How to Redeem Shares" in the SAI. Authorized entities other than the fund's transfer agent may apply different conditions for the satisfaction of "proper form" requirements. For more information, consult a representative of your financial intermediary. The fund's NAV is disclosed daily at www.dreyfus.com and also is available by calling 1-800-DREYFUS. When calculating NAVs, Dreyfus values equity investments on the basis of market quotations or official closing prices. Dreyfus generally values fixed-income investments based on values supplied by an independent pricing service approved by the fund's board. The pricing service's procedures are reviewed under the general supervision of the board. If market quotations or official closing prices or valuations from a pricing service are not readily available, or are determined not to reflect accurately fair value, the fund may value those investments at fair value as determined in accordance with procedures approved by the fund's board. Fair value of investments may be determined by the fund's board, its pricing committee or its valuation committee in good faith using such information as it deems appropriate under the circumstances. Under certain circumstances, the fair value of foreign equity securities will be provided by an independent pricing service. Using fair value to price investments may result in a value that is different from a security's most recent closing price and from the prices used by other mutual funds to calculate their net asset values. Over-the-counter derivative instruments generally will be valued based on values supplied by an independent pricing service approved by the fund's board. Futures contracts will be valued at the most recent settlement price. Forward currency contracts will be valued using the forward rate obtained from an independent pricing service approved by the fund's board. ETFs will be valued at their market price. Foreign securities held by the fund may trade on days when the fund does not calculate its NAV and thus may affect the fund's NAV on days when investors will not be able to purchase or sell (redeem) fund shares.

Investments in certain types of thinly traded securities may provide short-term traders arbitrage opportunities with respect to the fund's shares. For example, arbitrage opportunities may exist when trading in a portfolio security or securities is halted and does not resume, or the market on which such securities are traded closes before the fund calculates its NAV. If short-term investors in the fund were able to take advantage of these arbitrage opportunities, they could dilute the NAV of fund shares held by long-term investors. Portfolio valuation policies can serve to reduce arbitrage opportunities available to short-term traders, but there is no assurance that such valuation policies will prevent dilution of the fund's NAV by short-term traders. While the fund has a policy regarding frequent trading, it too may not be completely effective to prevent short-term NAV arbitrage trading, particularly in regard to omnibus accounts. Please see "Shareholder Guide — General Policies" for further information about the fund's frequent trading policy.

Orders to buy and sell shares received by an authorized entity (such as a bank, broker-dealer or financial adviser, or Retirement Plan that has entered into an agreement with the fund's distributor) by the time as of which the fund calculates its NAV and transmitted to the fund's distributor or its designee by the close of its business day (usually 5:15 p.m. Eastern time) will be based on the NAV determined that day.

How to Buy Shares

By Mail.

Regular Accounts. To open a regular account, complete an application and mail it, together with a check payable to The Dreyfus Family of Funds, to the appropriate address below. To purchase additional shares in a regular account, mail a check payable to The Dreyfus Family of Funds (with your account number on your check), together with an investment slip, to the appropriate address below.

IRA Accounts. To open an IRA account or make additional investments in an IRA account, be sure to specify the fund name and the year for which the contribution is being made. When opening a new account include a completed IRA application applicable to the type of IRA for which the investment is made, and when making additional investments include an investment slip. Make checks payable to The Dreyfus Family of Funds, and mail to the appropriate address below.

Mailing Address. If you are investing directly through the fund, mail to:

Dreyfus Shareholder Services
P.O. Box 9879
Providence, Rhode Island 02940-8079

If you are investing through a third party, such as a bank, broker-dealer or financial adviser, or in a Retirement Plan, mail to:

Dreyfus Institutional Department
P.O. Box 9882
Providence, Rhode Island 02940-8082

If you are applying for an Institutional Direct account, please contact your BNY Mellon relationship manager for mailing instructions.

Electronic Check or Wire. To purchase shares in a regular or IRA account by wire or electronic check, please call 1-800-DREYFUS (inside the U.S. only) for more information.

Telephone or Online. To purchase additional shares by telephone or online, you can call 1-800-DREYFUS (inside the U.S. only) or visit www.dreyfus.com to request your transaction. In order to do so, you must have elected the Dreyfus TeleTransfer Privilege on your account application or a Shareholder Services Form. See "Services for Fund Investors — Wire Redemption and Dreyfus TeleTransfer Privileges" for more information. Institutional Direct accounts are not eligible for online services.

Automatically. You may purchase additional shares in a regular or IRA account by selecting one of Dreyfus' automatic investment services made available to the fund on your account application or service application. See "Services for Fund Investors."

The minimum initial and subsequent investment (except as set forth below) is \$1,000 and \$100, respectively. For Class Y shares, the minimum initial investment generally is \$1,000,000, with no minimum subsequent investment. The minimum initial investment for Dreyfus-sponsored Retirement Plans or Dreyfus-sponsored IRAs (other than Coverdell Education Savings Accounts) is \$750, with no minimum subsequent investment. The minimum initial investment for Dreyfus-sponsored Coverdell Education Savings Accounts is \$500, with no minimum subsequent investment. Subsequent investments made through Dreyfus TeleTransfer are subject to a \$100 minimum and a \$150,000 maximum. All investments must be in U.S. dollars. Third-party checks, cash, travelers' checks or money orders will not be accepted. You may be charged a fee for any check that does not clear.

How to Sell Shares

You may sell (redeem) shares at any time. Your shares will be sold at the next NAV calculated after your order is received in proper form by the fund's transfer agent or other authorized entity. Any certificates representing fund shares being sold must be returned with your redemption request. Your order will be processed promptly.

If you request the fund to transmit your redemption proceeds to you by check, the fund expects that your redemption proceeds normally will be sent within two business days after your request is received in proper form. If you request the fund to transmit your redemption proceeds to you by wire via the Wire Redemption Privilege (\$1,000 minimum) or electronic check via the Dreyfus TeleTransfer Privilege (\$500 minimum), and the fund has your bank account information on file, the fund expects that your redemption proceeds normally will be wired within one business day or sent by electronic check within two business days, as applicable, to your bank account after your request is received in proper form. See "Services for Fund Investors — Wire Redemption and Dreyfus TeleTransfer Privileges" for more information. Payment of redemption proceeds may take longer than the number of days the fund typically expects and may take up to seven days after your order is received in proper form by the fund's transfer agent or other authorized entity, particularly during periods of stressed market conditions or very large redemptions or excessive trading.

The processing of redemptions may be suspended, and the delivery of redemption proceeds may be delayed beyond seven days, depending on the circumstances, for any period: (i) during which the NYSE is closed (other than on holidays or weekends), or during which trading on the NYSE is restricted; (ii) when an emergency exists that makes the disposal of securities owned by the fund or the determination of the fair value of the fund's net assets not reasonably practicable; or (iii) as permitted by order of the Securities and Exchange Commission for the protection of fund shareholders. For these purposes, the Securities and Exchange Commission determines the conditions under which trading shall be deemed to be restricted and an emergency shall be deemed to exist.

Before selling shares recently purchased by check, Dreyfus TeleTransfer or Automatic Asset Builder, please note that:

- if you send a written request to sell such shares, the fund may delay sending the proceeds for up to eight business days following the purchase of those shares or until the fund receives verification of clearance of the funds used to purchase such shares

- the fund will not process wire, telephone, online or Dreyfus TeleTransfer redemption requests for up to eight business days following the purchase of those shares or until the fund receives verification of clearance of the funds used to purchase such shares

Under normal circumstances, the fund expects to meet redemption requests by using cash it holds in its portfolio or selling portfolio securities to generate cash. In addition, the fund, and certain other funds in the Dreyfus Family of Funds, may draw upon an unsecured credit facility for temporary or emergency purposes to meet redemption requests. The fund also reserves the right to pay redemption proceeds in securities rather than cash (i.e., "redeem in kind"), to the extent the composition of the fund's investment portfolio enables it to do so, if the amount redeemed is large enough to affect fund operations (for example, if it exceeds 1% of the fund's assets) or the redemption request is during stressed market conditions. Securities distributed in connection with any such redemption in-kind are expected to generally represent your pro rata portion of assets held by the fund immediately prior to the redemption, with adjustments as may be necessary in connection with, for example, certain derivatives, restricted securities, odd lots or fractional shares. Any securities distributed in-kind will remain exposed to market risk until sold, and you may incur transaction costs and taxable gain when selling the securities.

To keep your CDSC as low as possible, each time you request to sell shares we will first sell shares that are not subject to a CDSC, and then those subject to the lowest charge. The CDSC is based on the lesser of the original purchase cost or the current market value of the shares being sold, and is not charged on fund shares you acquired by reinvesting your fund dividends. As described above in this prospectus, there are certain instances when you may qualify to have the CDSC waived. Consult your financial representative or refer to the SAI for additional details.

By Mail.

Regular Accounts. To redeem shares in a regular account by mail, send a letter of instruction that includes your name, your account number, the name of the fund, the share class, the dollar amount to be redeemed and how and where to send the proceeds. Mail your request to the appropriate address below.

IRA Accounts. To redeem shares in an IRA account by mail, send a letter of instruction that includes all of the same information for regular accounts and indicate whether the distribution is qualified or premature and whether the 10% TEFRA should be withheld. Mail your request to the appropriate address below.

Mailing Address. If you invested directly through the fund, mail to:

Dreyfus Shareholder Services
P.O. Box 9879
Providence, Rhode Island 02940-8079

If you invested through a third party, such as a bank, broker-dealer or financial adviser, or in a Retirement Plan, mail to:

Dreyfus Institutional Department
P.O. Box 9882
Providence, Rhode Island 02940-8082

If you are an Institutional Direct accountholder, please contact your BNY Mellon relationship manager for mailing instructions.

A medallion signature guarantee is required for some written sell orders. These include:

- amounts of \$10,000 or more on accounts whose address has been changed within the last 30 days
- requests to send the proceeds to a different payee or address
- amounts of \$100,000 or more

A medallion signature guarantee helps protect against fraud. You can obtain one from most banks or securities dealers, but not from a notary public. For joint accounts, each signature must be guaranteed. Please call to ensure that your medallion signature guarantee will be processed correctly.

Telephone or Online. To redeem shares by telephone or online, call 1-800-DREYFUS (inside the U.S. only) or, for regular accounts, visit www.dreyfus.com to request your transaction. Institutional Direct accounts are not eligible for online services.

By calling 1-800-DREYFUS (inside the U.S. only), you may speak to a Dreyfus representative and request that redemption proceeds be paid by check and mailed to your address of record (maximum \$250,000 per day). For redemption requests made online through www.dreyfus.com or through Dreyfus Express® automated account access system, there is a \$100,000 per day limit.

Automatically. You may sell shares in a regular account by completing a Dreyfus Automatic Withdrawal Form which you can obtain by calling 1-800-DREYFUS (inside the U.S. only), visiting www.dreyfus.com or contacting your financial representative. For instructions on how to establish automatic withdrawals to sell shares in an IRA account, please call 1-800-DREYFUS (inside the U.S. only) or contact your financial representative. See "Services for Fund Investors — Automatic Services."

General Policies

The fund and the fund's transfer agent are authorized to act on telephone or online instructions from any person representing himself or herself to be you and reasonably believed by the fund or the transfer agent to be genuine. You may be responsible for any fraudulent telephone or online order as long as the fund or the fund's transfer agent (as applicable) takes reasonable measures to confirm that the instructions are genuine.

The fund reserves the right to reject any purchase or exchange request in whole or in part. All shareholder services and privileges offered to shareholders may be modified or terminated at any time, except as otherwise stated in the fund's SAI. Please see the fund's SAI for additional information on buying and selling shares, privileges and other shareholder services.

If you invest through a financial intermediary (rather than directly through the fund), the policies may be different than those described herein. For example, banks, brokers, Retirement Plans, financial advisers and financial supermarkets may charge transaction fees and may set different minimum investments or limitations on buying or selling shares. Please consult your financial representative.

The fund is designed for long-term investors. Frequent purchases, redemptions and exchanges may disrupt portfolio management strategies and harm fund performance by diluting the value of fund shares and increasing brokerage and administrative costs. As a result, Dreyfus and the fund's board have adopted a policy of discouraging excessive trading, short-term market timing and other abusive trading practices (frequent trading) that could adversely affect the fund or its operations. Dreyfus and the fund will not enter into arrangements with any person or group to permit frequent trading.

The fund also reserves the right to:

- refuse any purchase or exchange request, including those from any individual or group who, in Dreyfus' view, is likely to engage in frequent trading
- change or discontinue fund exchanges, or temporarily suspend exchanges during unusual market conditions
- change its minimum investment amount

More than four roundtrips within a rolling 12-month period generally is considered to be frequent trading. A roundtrip consists of an investment that is substantially liquidated within 60 days. Based on the facts and circumstances of the trades, the fund may also view as frequent trading a pattern of investments that are partially liquidated within 60 days.

Transactions made through Dreyfus Automatic Withdrawal Plan, Dreyfus Auto-Exchange Privileges, automatic investment plans (including Dreyfus Automatic Asset Builder[®]), automatic non-discretionary rebalancing programs and minimum required retirement distributions generally are not considered to be frequent trading. For Retirement Plans, generally only participant-initiated exchange transactions are subject to the roundtrip limit.

Dreyfus monitors selected transactions to identify frequent trading. When its surveillance systems identify multiple roundtrips, Dreyfus evaluates trading activity in the account for evidence of frequent trading. Dreyfus considers the investor's trading history in other accounts under common ownership or control, in other Dreyfus Funds and BNY Mellon Funds and, if known, in non-affiliated mutual funds and accounts under common control. These evaluations involve judgments that are inherently subjective, and while Dreyfus seeks to apply the policy and procedures uniformly, it is possible that similar transactions may be treated differently. In all instances, Dreyfus seeks to make these judgments to the best of its abilities in a manner that it believes is consistent with shareholder interests. If Dreyfus concludes the account is likely to engage in frequent trading, Dreyfus may cancel or revoke the purchase or exchange on the following business day. Dreyfus may also temporarily or permanently bar such investor's future purchases into the fund in lieu of, or in addition to, canceling or revoking the trade. At its discretion, Dreyfus may apply these restrictions across all accounts under common ownership, control or perceived affiliation.

Fund shares often are held through omnibus accounts maintained by financial intermediaries, such as brokers and Retirement Plan administrators, where the holdings of multiple shareholders, such as all the clients of a particular broker, are aggregated. Dreyfus' ability to monitor the trading activity of investors whose shares are held in omnibus accounts is limited. However, the agreements between the distributor and financial intermediaries include obligations to comply with the terms of this prospectus and to provide Dreyfus, upon request, with information concerning the trading activity

of investors whose shares are held in omnibus accounts. If Dreyfus determines that any such investor has engaged in frequent trading of fund shares, Dreyfus may require the financial intermediary to restrict or prohibit future purchases or exchanges of fund shares by that investor.

Certain Retirement Plans and intermediaries that maintain omnibus accounts with the fund may have developed policies designed to control frequent trading that may differ from the fund's policy. At its sole discretion, the fund may permit such intermediaries to apply their own frequent trading policy. If you are investing in fund shares through a financial intermediary (or in the case of a Retirement Plan, your plan sponsor), please contact the financial intermediary for information on the frequent trading policies applicable to your account.

To the extent the fund significantly invests in foreign securities traded on markets that close before the fund calculates its NAV, events that influence the value of these foreign securities may occur after the close of these foreign markets and before the fund calculates its NAV. As a result, certain investors may seek to trade fund shares in an effort to benefit from their understanding of the value of these foreign securities at the time the fund calculates its NAV (referred to as price arbitrage). This type of frequent trading may dilute the value of fund shares held by other shareholders. The fund has adopted procedures designed to adjust closing market prices of foreign equity securities under certain circumstances to reflect what it believes to be their fair value.

To the extent the fund significantly invests in thinly traded securities, certain investors may seek to trade fund shares in an effort to benefit from their understanding of the value of these securities (referred to as price arbitrage). Any such frequent trading strategies may interfere with efficient management of the fund's portfolio to a greater degree than funds that invest in highly liquid securities, in part because the fund may have difficulty selling these portfolio securities at advantageous times or prices to satisfy large and/or frequent redemption requests. Any successful price arbitrage may also cause dilution in the value of fund shares held by other shareholders.

Although the fund's frequent trading and fair valuation policies and procedures are designed to discourage market timing and excessive trading, none of these tools alone, nor all of them together, completely eliminates the potential for frequent trading.

Small Account Policies

To offset the relatively higher costs of servicing smaller accounts, the fund may charge regular accounts with balances below \$2,000 an annual fee of \$12. The fee generally will be imposed during the fourth quarter of each calendar year.

No small account fee will be charged: any investor whose aggregate Dreyfus mutual fund investments total at least \$25,000; IRA accounts; Retirement Plan accounts; accounts participating in automatic investment programs; and accounts opened through a financial institution.

If your account falls below \$500, the fund may ask you to increase your balance. If it is still below \$500 after 45 days, the fund may close your account and send you the proceeds.

Escheatment

If your account is deemed "abandoned" or "unclaimed" under state law, the fund may be required to "escheat" or transfer the assets in your account to the applicable state's unclaimed property administration. The state may sell escheated shares and, if you subsequently seek to reclaim your proceeds of liquidation from the state, you may only be able to recover the amount received when the shares were sold. It is your responsibility to ensure that you maintain a correct address for your account, keep your account active by contacting the fund's transfer agent or distributor by mail or telephone or accessing your account through the fund's website at least once a year, and promptly cash all checks for dividends, capital gains and redemptions. The fund, the fund's transfer agent and Dreyfus and its affiliates will not be liable to shareholders or their representatives for good faith compliance with state escheatment laws.

Distributions and Taxes

Each share class will generate a different dividend because each has different expenses. The fund earns dividends, interest and other income from its investments, and distributes this income (less expenses) to shareholders as dividends. The fund also realizes capital gains from its investments, and distributes these gains (less any losses) to shareholders as capital gain distributions. The fund normally pays dividends and capital gain distributions annually. Fund dividends and capital gain distributions will be reinvested in the fund unless you or your financial intermediary instruct the fund otherwise. There are no fees or sales charges imposed by the fund on reinvestments.

Distributions paid by the fund are subject to federal income tax, and may also be subject to state or local taxes (unless you are investing through an IRA, Retirement Plan or other U.S. tax-advantaged investment plan). For federal tax purposes, in general, certain fund distributions, including distributions of short-term capital gains, are taxable as ordinary

income. Other fund distributions, including dividends from certain U.S. companies and certain foreign companies and distributions of long-term capital gains, generally are taxable as qualified dividends and capital gains, respectively.

The fund's investments in foreign securities may be subject to foreign withholding or other foreign taxes, which would decrease the fund's return on such securities. Under certain circumstances, shareholders may be entitled to claim a credit or deduction with respect to foreign taxes paid by the fund. In addition, investments in foreign securities or foreign currencies may increase or accelerate the fund's recognition of ordinary income and may affect the timing or amount of the fund's distributions.

High portfolio turnover and more volatile markets can result in significant taxable distributions to shareholders, regardless of whether their shares have increased in value. The tax status of any distribution generally is the same regardless of how long you have been in the fund and whether you reinvest your distributions or take them in cash.

If you buy shares of the fund when the fund has realized but not yet distributed income or capital gains, you will be "buying a dividend" by paying the full price for the shares and then receiving a portion back in the form of a taxable distribution.

Your sale of shares, including exchanges into other funds, may result in a capital gain or loss for tax purposes. A capital gain or loss on your investment in the fund generally is the difference between the cost of your shares and the amount you receive when you sell them.

The tax status of your distributions will be detailed in your annual tax statement from the fund. Because everyone's tax situation is unique, please consult your tax adviser before investing.

Annual year-end distribution estimates, if any, are expected to be available beginning in early October, and may be updated from time to time, at www.dreyfus.com/accounts-services/tax-center or by calling 1-800-DREYFUS (inside the U.S. only) or your financial representative.

Services for Fund Investors

The following services may be available to fund investors. If you purchase shares through a third party financial intermediary or in a Retirement Plan, the financial intermediary or Retirement Plan recordkeeper may impose different restrictions on these services and privileges, or may not make them available at all. Consult a representative of your financial intermediary or Retirement Plan for further information.

Automatic Services

Buying or selling shares automatically is easy with the services described below. With each service, you select a schedule and amount, subject to certain restrictions. These services are not available for Class Y shares. For information, call 1-800-DREYFUS (inside the U.S. only) or your financial representative.

Dreyfus Automatic Asset Builder[®] permits you to purchase fund shares (minimum of \$100 and maximum of \$150,000 per transaction) at regular intervals selected by you. Fund shares are purchased by transferring funds from the bank account designated by you.

Dreyfus Payroll Savings Plan permits you to purchase fund shares (minimum of \$100 per transaction) automatically through a payroll deduction.

Dreyfus Government Direct Deposit permits you to purchase fund shares (minimum of \$100 and maximum of \$50,000 per transaction) automatically from your federal employment, Social Security or other regular federal government check.

Dreyfus Dividend Sweep permits you to automatically reinvest dividends and distributions from the fund in shares of the same class, or another class in which you are eligible to invest, of another fund in the Dreyfus Family of Funds. However, if you hold fund shares through financial intermediary brokerage platforms, you may invest automatically your dividends and distributions from the fund only in shares of the same class of another fund in the Dreyfus Family of Funds. Shares held through a Dreyfus-sponsored Coverdell Education Savings Account are not eligible for this privilege.

Dreyfus Auto-Exchange Privilege permits you to exchange at regular intervals your fund shares for shares of the same class, or another class in which you are eligible to invest, of another fund in the Dreyfus Family of Funds. However, if you hold fund shares through financial intermediary brokerage platforms, you may only exchange fund shares for shares of the same class of another fund in the Dreyfus Family of Funds.

Dreyfus Automatic Withdrawal Plan permits you to make withdrawals (minimum of \$50) on a specific day each month, quarter or semiannual or annual period, provided your account balance is at least \$5,000. Any CDSC will be

waived, as long as the amount of any withdrawal does not exceed on an annual basis 12% of the greater of the account value at the time of the first withdrawal under the plan, or at the time of the subsequent withdrawal.

Fund Exchanges

Generally, you can exchange shares worth \$500 or more (no minimum for Dreyfus-sponsored Retirement Plans and Dreyfus-sponsored IRAs) into shares of the same class, or another class in which you are eligible to invest, of another fund in the Dreyfus Family of Funds. However, if you hold fund shares through financial intermediary brokerage platforms, you may only exchange fund shares for shares of the same class of another fund in the Dreyfus Family of Funds. You can request your exchange by calling 1-800-DREYFUS (inside the U.S. only) or your financial representative. If you are an Institutional Direct account holder, please contact your BNY Mellon relationship manager for instructions. Be sure to read the current prospectus for any fund into which you are exchanging before investing. Any new account established through an exchange generally will have the same privileges as your original account (as long as they are available). There is currently no fee for exchanges, although you may be charged a sales load when exchanging into any fund that has one.

Your exchange request will be processed on the same business day it is received in proper form, provided that each fund is open at the time of the request (i.e., the request is received by the latest time each fund calculates its NAV for that business day). If the exchange is accepted at a time of day after one or both of the funds is closed (i.e., at a time after the NAV for the fund has been calculated for that business day), the exchange will be processed on the next business day. See the SAI for more information regarding exchanges.

Conversion Feature

Shares of one class of the fund may be converted into shares of another class of the fund, provided you meet the eligibility requirements for investing in the new share class. Shares subject to a CDSC at the time of the requested conversion are not eligible for conversion. The fund reserves the right to refuse any conversion request.

Wire Redemption and Dreyfus TeleTransfer Privileges

To redeem shares from your Dreyfus Fund account with a phone call (for regular or IRA accounts) or online (for regular accounts only), use the Wire Redemption Privilege or the Dreyfus TeleTransfer Privilege. To purchase additional shares of your Dreyfus Fund account with a phone call (for regular or IRA accounts) or online (for regular accounts only), use the Dreyfus TeleTransfer Privilege. You can set up the Wire Redemption Privilege and Dreyfus TeleTransfer Privilege on your account by providing bank account information and following the instructions on your application or, if your account has already been established, a Shareholder Services Form which you can obtain by calling 1-800-DREYFUS (inside the U.S. only), visiting www.dreyfus.com or by contacting your financial representative. Shares held in a Coverdell Education Savings Account may not be redeemed through the Wire Redemption or Dreyfus TeleTransfer Privileges. Institutional Direct accounts are not eligible for the Wire Redemption or Dreyfus TeleTransfer Privileges initiated online.

Account Statements

Every Dreyfus Fund investor automatically receives regular account statements. You will also be sent a yearly statement detailing the tax characteristics of any dividends and distributions you have received.

Reinvestment Privilege

If you redeem Class A shares of the fund, you can reinvest in the same account of the fund up to the number of Class A shares you redeemed at the current share price without paying a sales charge. If you paid a CDSC, it will be credited back to your account. This privilege may be used only once and your reinvestment request must be received in writing by the fund within 45 days of the redemption.

Dreyfus Express® Voice-Activated Account Access

You can check your Dreyfus account balances, get fund price and performance information, order documents and much more, by calling 1-800-DREYFUS (inside the U.S. only) and using the Dreyfus Express® Voice-Activated System. You may also be able to purchase fund shares and/or transfer money between your Dreyfus Funds using Dreyfus Express®. Certain requests require the services of a representative.

Financial Highlights

As a new fund, financial highlights information is not available for the fund as of the date of this prospectus.

NOTES

NOTES

For More Information

BNY Mellon Insight Broad Opportunities Fund

A series of BNY Mellon Absolute Insight Funds, Inc.

More information on this fund is available free upon request, including the following:

Annual/Semiannual Report

The fund's annual and semiannual reports describe the fund's performance, list portfolio holdings and contain a letter from the fund's manager discussing recent market conditions, economic trends and fund strategies that significantly affected the fund's performance during the period covered by the report. The fund's most recent annual and semiannual reports are available at www.dreyfus.com.

Statement of Additional Information (SAI)

The SAI provides more details about the fund and its policies. A current SAI is available at www.dreyfus.com and is on file with the Securities and Exchange Commission (SEC). The SAI is incorporated by reference (and is legally considered part of this prospectus).

Portfolio Holdings

Dreyfus funds generally disclose, at www.dreyfus.com under Products, (1) complete portfolio holdings as of each month-end with a one month lag and as of each calendar quarter end with a 15-day lag; (2) top 10 holdings as of each month-end with a 10-day lag; and (3) from time to time, certain security-specific performance attribution data as of a month-end, with a 10-day lag. From time to time a fund may make available certain portfolio characteristics, such as allocations, performance- and risk-related statistics, portfolio-level statistics and non-security specific attribution analyses, on request. Dreyfus money market funds generally disclose, also at www.dreyfus.com under Products, their complete schedule of holdings daily. A fund's portfolio holdings and any security-specific performance attribution data will remain on the website at least until the fund files its Form N-Q or Form N-CSR for the period that includes the dates of the posted holdings.

A complete description of the fund's policies and procedures with respect to the disclosure of the fund's portfolio securities is available in the fund's SAI and at www.dreyfus.com.
