The performance data quoted represents past performance, which is no guarantee of future results. Share price and investment return fluctuate and an investor’s shares may be worth more or less than original cost upon redemption. Current performance may be lower or higher than the performance quoted. Returns are net of fund expenses, and assume reinvestment of distributions. Investors who purchase shares of the fund through an investment adviser or other financial professional may separately pay a fee to that service provider. The returns do not reflect broker sales charges or commissions. Performance for periods less than 1 year are not annualized.

**Market Price and NAV History**

The performance data quoted represents past performance, which is no guarantee of future results.

---

\(^1\) All figures as of month-end. Past performance and share price do not guarantee future results. \(^2\)Managed assets means the total assets of the fund, including any assets attributable to leverage, minus the fund's accrued liabilities, other than any liabilities or obligations attributable to leverage. \(^3\)Portfolio composition as of 03/31/2019 and is subject to change at any time. \(^4\)Average effective duration is used to measure the market price sensitivity of the fund’s portfolio holdings to market interest-rate changes; duration is expected to change over time with changes in market factors and the time to maturity of the fund’s portfolio holdings. Effective duration incorporates certain characteristics of the fund’s portfolio holdings, such as yield, coupon payments, price and par value, final maturity (if any) and any call features. Generally, rising interest rates may lengthen the duration of the fund as portfolio holdings with call features may become less likely to be exercised as interest rates rise, making them more sensitive to changes in interest rates. Conversely, decreasing interest rates generally may shorten the fund’s duration if any call features of portfolio holdings are more likely to be exercised as a result of such interest-rate decrease, thereby making the fund less sensitive to changes in interest rates. The fund is not subject to any formal restrictions on its average portfolio maturity or on its average portfolio duration or the maturity of the individual bonds in which it invests. \(^5\)Percentage is calculated by dividing the fund’s outstanding borrowings by the fund’s net assets plus outstanding borrowings. \(^6\)Distribution rates are not performance. Past distributions can include ordinary income, net capital gains, but not a return of capital (ROC) of your investment in the fund as of 3/31/2019. A distribution rate that includes an ROC should not be confused with yield or income. Please refer to the most recent Section 19 Notice, if applicable, for additional information regarding the composition of distributions. Final determination of a distribution’s tax character will be made on Form 1099 DIV sent to shareholders each January. \(^7\)The annualized distribution rates at NAV, market price and initial public offering price are calculated by multiplying the most recent monthly dividend rate declared as of the quarter-end by 12 and dividing by the applicable price per share (NAV, market or initial public offering price) stated. \(^8\)The Original NAV is the Initial Public Offering Price of $10.00 minus the sales load for the Original NAV of $9.835. The objective to return the Fund's Original NAV is not an express or implied guarantee obligation of the Fund, Dreyfus, Alcentra or any other entity, and an investor may receive less than the Original NAV upon termination of the Fund. \(^9\)Does not include sales load. \(^10\)Average Effective Maturity is the weighted average of the effective maturity dates of the fixed-income securities in the fund’s holdings. Past performance is no guarantee of future performance, and price, yield and dividend rate will vary. The use of leverage can magnify the fund’s gains and losses. If you have questions, contact Dreyfus at 1-800-334-6899.

Fund Strategies
- Under normal market conditions, the fund will invest at least 80% of its Managed Assets in credit instruments and other investments with similar credit and economic characteristics.
- The fund intends to focus its investments in the credit instruments of the U.S. and European countries, but may also invest in companies anywhere in the world.
- The manager expects to allocate the credit investments across the following strategies:
  - Senior Secured Loans and other Loans Strategy (at least 25%)
  - Corporate Debt Strategy (at least 25%)
  - Special Situations Strategy (no more than 15%)
  - No more than 30% in both Special Situations and Structured Credit Strategies
- No more than 25% in any one particular industry
- No more than 25% in securities of issuers located in any single country outside of the United States

Proprietary Research Capabilities and Investment Process
- As one of the largest providers of capital to leveraged lending markets, Alcentra maintains strong relationships with company management teams, arrangers, trading desks and private equity sponsors.
- Sector specialization enables deeper industry knowledge and a stronger understanding of capital structure.
- Collaborative process and rigorous discipline helps produce an efficient portfolio with active risk management.
- Holistic investment approach combines five income and total return strategies (U.S. bonds, EU bonds, U.S. loans, EU loans and return-seeking investments) in one optimized asset allocation process using simple governance and integrated risk management.

Main Risks
- Credit risk is the risk that one or more credit instruments in the fund’s portfolio will decline in price or fail to pay interest or principal when due because the issuer of the instrument experiences a decline in its financial status. The market value of credit instruments may decline for a number of reasons that directly relate to the issuer, such as management performance, financial leverage and reduced demand for the issuer’s goods and services. The fund’s primary portfolio managers will make all determinations regarding allocations and reallocations of the fund’s managed assets to each Credit Strategy. The percentage allocations among Credit Strategies may, from time to time, be out of balance with the target allocations set by the fund’s primary portfolio managers due to various factors, such as varying investment performance among Credit Strategies, illiquidity of certain portfolio investments or a change in the target allocations. Any rebalancing of the fund’s portfolio, whether pursuant to a fixed percentage allocation or otherwise, may have an adverse effect on the performance of the fund and may be subject to certain additional limits and constraints. Shares of closed-end funds frequently trade at a discount. This characteristic of shares of closed-end funds is a risk separate and distinct from the risk that the fund’s net asset value may decrease. Common shareholders who sell their common shares within a relatively short period after completion of this public offering are likely to be exposed to this risk. The fund has no operating history and its common shares have no history of public trading. As a result, prospective investors have no track record or history on which to base their investment decision. An investment in the fund involves special risk considerations, which are summarized below. The fund is designed as a long-term investment and not as a vehicle for short-term trading purposes. An investment in the fund’s common shares may be speculative and it involves a high degree of risk. The fund should not constitute a complete investment program. Due to the uncertainty in all investments, there can be no assurance that the fund will achieve its investment objectives. It is anticipated that the fund will terminate on or about December 1, 2024. As the assets of the fund will be liquidated in connection with its termination, the fund may be required to sell portfolio securities when it otherwise would, not including at times when market conditions are not favorable, which may cause the fund to lose money.

MBSC Securities Corporation (MBSC) is a registered broker-dealer. MBSC and Alcentra are subsidiaries of The Bank of New York Mellon Corporation.

This information should not be construed as investment advice or recommendations for any particular investment. Additional information regarding the Fund can be found in the Fund's most recent shareholder report.
